Attorneys for Plaintiff Daimler Truck North America LLC
(additional counsel on signature pages)

**IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF CALIFORNIA**

DAIMLER TRUCK NORTH AMERICA LLC,
INTERNATIONAL MOTORS, LLC,
PACCAR INC,
and VOLVO GROUP NORTH AMERICA LLC,

Plaintiffs,

v.

CALIFORNIA AIR RESOURCES BOARD;
STEVEN S. CLIFF, in his official capacity as the
Executive Officer of the California Air
Resources Board;
and GAVIN NEWSOM, in his official capacity
as the Governor of California,

Defendants.

Civil Action No.

**COMPLAINT FOR DECLARATORY
JUDGMENT AND INJUNCTIVE
RELIEF**

NATURE OF THE ACTION

1
2 1. This case arises from the State of California’s violation of a prohibition in the Clean Air
3 Act that expressly bars any State from adopting or attempting to enforce any standards relating to the
4 control of emissions from new heavy-duty vehicles and engines without a waiver of federal preemption.
5 In June, pursuant to the Congressional Review Act, the federal government statutorily preempted Cal-
6 ifornia’s emissions standards governing heavy-duty vehicles and engines. Notwithstanding that new
7 legislation, California continues to demand compliance with its heavy-duty emissions standards, and it
8 has threatened Original Equipment Manufacturers (“OEMs”) that design, develop, manufacture and
9 sell heavy-duty vehicles and engines—four of whom are Plaintiffs here—with civil sanctions and un-
10 favorable regulatory treatment if the OEMs refuse to comply with the State’s unlawful standards, while
11 also taking measures to insulate itself from lawful challenges to those standards. The federal govern-
12 ment has responded in turn through the U.S. Department of Justice, which issued Cease & Desist letters
13 to Plaintiff OEMs stating that California’s enforcement of its standards is contrary to federal law, and
14 directing Plaintiff OEMs to immediately cease and desist compliance with California’s preempted and
15 unlawful mandates. Plaintiffs are caught in the crossfire: California demands that OEMs follow
16 preempted laws; the United States maintains such laws are illegal and orders OEMs to disregard them.
17 This situation is not tenable. Accordingly, Plaintiff OEMs file this lawsuit to clarify their legal obliga-
18 tions under federal and state law and to enjoin California from enforcing standards preempted by fed-
19 eral law.

20 2. Recognizing the harms that would result from a patchwork of environmental regula-
21 tions, Congress in 1970 enacted Title II of the Clean Air Act, which authorizes the Environmental
22 Protection Agency (“EPA”) to establish a comprehensive program for regulating emissions from new
23 motor vehicles. 42 U.S.C. § 7522(a)(1). To that end, the Clean Air Act explicitly preempts state laws
24 that regulate motor vehicle emissions with one exception—EPA may waive the application of federal
25 preemption for California emissions standards under certain defined circumstances. 42 U.S.C. § 7543.
26 Once EPA has issued a waiver, other states are permitted to opt-in to California’s standards under
27 section 177 of the Clean Air Act. 42 U.S.C. § 7507.

3. As a result, there have historically been two distinct sets of emissions standards applicable to vehicle manufacturers, including manufacturers of heavy-duty vehicles and engines: (1) standards promulgated by the California Air Resources Board (“CARB”), and then approved by EPA, that apply in California and any other state that has adopted California’s standards; and (2) standards promulgated by EPA.

4. From 2021 to 2023, CARB promulgated a series of emissions standards significantly more stringent than their federal counterparts on heavy-duty trucks, including those manufactured by Plaintiff OEMs, and sought preemption waivers from the Biden Administration EPA.¹ As part of its program, CARB requires that sellers of heavy-duty trucks in California certify that their vehicles comply with CARB standards.

5. The inconsistent regulatory requirements resulting from those standards created an unstable and untenable landscape for manufacturers of heavy-duty trucks and engines, including Plaintiff OEMs and their customers. Among other things, the misaligned federal and California emissions standards provided Plaintiff OEMs with barely two years of lead time to comply with California’s aggressive emissions standards, a woefully inadequate compliance window given that the Clean Air Act itself mandates a minimum of *four* years of lead time for any new pollutant standards for heavy-duty vehicles. 42 U.S.C. § 7521(a)(3)(C). California’s most recent tailpipe emissions rules for trucks also did not align with corresponding federal standards, creating significant development and technical feasibility issues for industry. *See* Complaint, *Engine Mfrs. Ass’n v. Cal. Air Res. Bd.*, No. 2:22-cv-03663-JFW-PVC (C.D. Cal. May 27, 2022).

6. To address these concerns, heavy-duty truck and engine manufacturers and their trade

¹ California regulations for emissions from new motor vehicles and engines are divided into categories based on vehicle weight, with the largest vehicles and engines categorized as “heavy-duty,” moderately sized vehicles often used in commercial applications falling into the “medium-duty” category, and most cars and pickup trucks referred to as “light-duty.” *See, e.g.*, Cal. Code Regs. tit. 13, §§ 1900 (b)(5), (b)(6). Federal law also categorizes certain types of vehicles as “heavy duty” vehicles or engines. *See, e.g.*, 42 U.S.C. § 7521(a)(3)(B) (directing EPA to set emissions standards applicable to “heavy-duty vehicles or engines”). This complaint refers to “heavy-duty trucks” or “heavy-duty vehicles” as shorthand for the vehicles and engines, including medium-duty vehicles and engines, covered by the California regulations described herein and which are manufactured by the plaintiffs.

1 association petitioned CARB for relief from these infeasible regulatory requirements. The result, in
2 July 2023, was the “Clean Truck Partnership,” in which CARB outlined a plan to undertake regulatory
3 changes sought by industry—specifically, that CARB would harmonize federal and California tailpipe
4 emissions standards with agreed-upon regulatory amendments and provide sufficient lead time for fu-
5 ture regulations. As conditions for this relief, CARB extracted new concessions from the manufactur-
6 ers, including that the manufacturers would comply with CARB’s emissions standards “irrespective of
7 the outcome of any *litigation* challenging” them or CARB’s authority to implement those standards.
8 *See* Clean Truck Partnership (“CTP”), Ex. A, ¶ 2 & App’x B (emphasis added).

9 7. Under the Biden Administration, EPA had issued preemption waivers relating to
10 CARB’s emissions standards governing certifications of heavy-duty trucks. But earlier this year, Con-
11 gress acted through a bicameral legislative process under the Congressional Review Act to pass joint
12 resolutions disapproving the EPA’s earlier preemption waivers for California. On June 12, 2025, the
13 President signed those Congressional resolutions, creating new federal laws that expressly preempt
14 California’s heavy-duty vehicle emissions standards under the Clean Air Act. As a result, California
15 (and other states) are prohibited by federal law from adopting and attempting to enforce emissions-
16 related standards. EPA’s emissions standards now apply exclusively on a nationwide basis, including
17 in California. And DOJ has issued a letter to Plaintiff OEMs stating that “Federal law thus prohibits
18 CARB from adopting or attempting to enforce those regulations” governing heavy-duty trucks, and
19 ordering Plaintiff OEMs to cease compliance with the preempted rules. *See, e.g.*, Ex. B (U.S. Dep’t of
20 Just., Env’t & Nat. Res. Div., Cease & Desist Letter (Aug. 7, 2025) [hereinafter Aug. 7, 2025, DOJ
21 Letter]), at 1. EPA’s emissions standards now apply exclusively on a nationwide basis, including in
22 California.

23 8. California nevertheless sued the United States in the U.S. District Court for the Northern
24 District of California, alleging that the Congressional resolutions disapproving California’s preemption
25 waivers are unlawful and unconstitutional. *California v. EPA*, No. 3:25-cv-04966-HSG (N.D. Cal.
26 filed June 12, 2025). California has not moved for preliminary relief. As of the filing of this Complaint,
27 the United States has not made any responsive filing. That case is ongoing and will continue without
28

1 a resolution for months or longer.

2 9. At the same time, notwithstanding the Congressional Review Act legislation, California
3 has asserted that heavy-duty vehicle and engine manufacturers must continue to follow California's
4 preempted standards to lawfully sell vehicles in the State—including by pointing to the Clean Truck
5 Partnership as a source of its continuing authority. California has taken additional affirmative steps to
6 enforce its preempted and unlawful standards:

7 a. First, California seeks to use the Clean Truck Partnership, which was
8 intended to harmonize compliance with state and federal law, to compel an entire in-
9 dustry to follow California emissions standards that are now in conflict with federal law,
10 and which have been expressly preempted by federal law. *See* Ex. B (Aug. 7, 2025,
11 DOJ Letter) at 1-2. In effect, California is seeking to enforce the Clean Truck Partner-
12 ship as an industry-wide mandate to follow regulations abrogated by federal legislation
13 and prohibited by federal law. This approach disregards the Clean Air Act's preemption
14 clause, which prohibits not just the adoption by any State of emissions standards re-
15 served to the federal government, but any State's "*attempt to enforce*" preempted stand-
16 ards. 42 U.S.C. § 7543(a) (emphasis added). California also disregards the plain lan-
17 guage of the Clean Truck Partnership, which states that manufacturers are obligated to
18 follow CARB's emissions regulations "regardless of the outcome of any litigation chal-
19 lenging ... those regulations, or CARB's overall authority to implement those regula-
20 tions," not federal legislative action taken to invalidate them. Ex. A (CTP), ¶ 2 & App'x
21 B. In sum, notwithstanding Congress' removal of California's authority to regulate
22 heavy-duty trucks and engines, CARB is attempting to use the Clean Truck Partner-
23 ship—which was intended to achieve alignment with federal standards—to compel
24 compliance with misaligned and now-preempted state emission standards. That attempt
25 is both inconsistent with the Clean Truck Partnership and violative of federal law.
26 CARB cannot attempt to enforce through a misapplied Clean Truck Partnership what
27 federal law prohibits it from doing as a regulator, nor can California contract around the
28

Supremacy Clause.

b. Second, on May 23, 2025, CARB issued an industry directive (in the form of a Manufacturers Advisory Correspondence or “MAC”) stating that manufacturers must continue to follow CARB’s preempted standards, including the certification requirement, to ensure “lawful” sales of vehicles and engines in California. Manufacturers Advisory Correspondence ECCD-2025-3, CARB (May 23, 2025) [hereinafter May 23, 2025 MAC].

c. Third, on June 13, 2025, California Governor Gavin Newsom issued Executive Order N-27-25 directing CARB to continue implementing the Clean Truck Partnership and threatening unfavorable regulatory treatment, as well as exclusion from government purchase and incentive programs, for vehicle and engine manufacturers who dispute the validity of the Clean Truck Partnership or do not comply with the preempted standards.

10. California also has continued to make public statements reinforcing its position that industry is obligated to disregard what CARB considers “unconstitutional and illegal resolutions purporting to overturn three of U.S. EPA’s decisions to grant California waivers” regarding its emissions standards. Thus, in a July 24, 2025 press release CARB again reinforced its view that compliance with the Clean Truck Partnership was still necessary to enable “lawful vehicle sales in California.” *See* Press Release, CARB, CARB approves amendments to clean truck standards to provide flexibility while maintaining emissions benefits (July 24, 2025), <https://perma.cc/8D4R-A26K>.

11. Meanwhile, in response to CARB’s actions, the federal government has reiterated that CARB’s vehicle emissions standards are preempted and California is now prohibited from attempting to enforce the state emissions standards at issue. On August 7, 2025, the U.S. Department of Justice sent a letter to Plaintiff OEMs reinforcing that the disapproval of California’s waivers by the federal legislative action has rendered California’s standards preempted, and further explaining that the Clean Truck Partnership itself is preempted under federal law as “the regulatory mechanism by which CARB attempts to enforce preempted California emissions standards.” *See, e.g.*, Ex. B (Aug. 7, 2025 DOJ

Letter), at 2.

12. The OEMs are in an impossible position. On the one hand, California insists that Plaintiff OEMs must follow CARB's standards, including CARB's truck and engine certification requirements, or be excluded from the California market, subjected to significant civil penalties, shut out of special considerations and flexibilities in future regulatory considerations, and excluded from state purchasing and incentive programs. On the other hand, the United States Department of Justice has issued cease-and-desist letters to Plaintiff OEMs stating that those same standards are invalid and unlawful, such that only the EPA regulations apply, and that the cornerstone of CARB's new enforcement efforts, the Clean Truck Partnership, is itself preempted by federal law. As a result, the OEMs are subject to two sovereigns whose regulatory requirements are irreconcilable and who are openly hostile to one another. Each wields a hammer to enforce its will on industry, leaving OEMs—who simply seek to sell heavy-duty trucks in compliance with the law—unable to plan with the necessary certainty and clarity where their products need to be certified for sale and by which regulatory authority.

13. Plaintiff OEMs have been irreparably harmed by this uncertainty. To adequately plan product production and allocation, OEMs must know which vehicles they are authorized to sell, and *where*, well in advance of the start of a model year on January 1. Applying for and receiving CARB certifications takes months—by CARB's own account, the process takes at *least* sixty days but there is no deadline by which CARB must complete its certification process.² OEMs must also incur significant costs and expend significant resources to engage in the certification process. To allow sufficient time for planning and running its business, Plaintiff OEMs need to know within a matter of weeks whether they must obtain a model year 2026 certification from CARB in order to lawfully sell their products in California and other opt-in states, which together represent approximately 25% of the national market for new vehicle registrations for heavy-duty vehicles.³ Citing the Clean Truck Partnership, California contends that OEMs must obtain this certification to have lawful vehicle sales in California. The federal government contends that the regulatory bases for such a California certification

² CARB, On-Road Heavy-Duty and Off-Road Compression Ignition Certification Programs: Certification Steps Overview, <https://perma.cc/UUT3-HWG5>.

³ CARB, States That Have Adopted California's Vehicle Regulations, <https://perma.cc/PA6F-UCF4>.

1 are fully preempted by federal law and invalid.

2 14. Prior to filing this lawsuit, Plaintiff OEMs and their trade association sought clarification
3 from CARB regarding OEMs' legal obligations under the Clean Truck Partnership and CARB's
4 underlying emissions standards, noting that the Clean Truck Partnership's requirements were invalid
5 for several reasons, including that they were preempted under the Clean Air Act. To date, CARB has
6 declined to address the concerns raised by regulated parties, despite requests by the Plaintiff OEMs and
7 their trade association, and instead issued the May 23, 2025 MAC and Executive Order N-27-25 with-
8 out any dialogue with industry.

9 15. Furthermore, Plaintiff OEMs have a constitutional right to challenge unlawful standards
10 and petition both the judiciary and the political branches for redress. But California has attempted to
11 unconstitutionally constrain those rights in its efforts to insulate itself from lawful challenges to its
12 actions. In that regard, the Clean Truck Partnership prohibits Plaintiff OEMs—as well as other manu-
13 facturer signatories—from challenging CARB's standards or from filing amicus briefs in support of
14 such challenges, and California officials have stated that OEMs that do so will face repercussions.
15 Plaintiff OEMs thus have been irreparably harmed as California officials infringe their constitutional
16 free speech rights.

17 16. Plaintiff OEMs bring this civil action for declaratory and injunctive relief with the goal
18 of clarifying and establishing the regulatory obligations that they must follow to lawfully offer products
19 for sale in California and the various opt-in states, and to prevent California officials from violating
20 their constitutional rights. An expeditious decision is essential for the OEMs.

21 JURISDICTION AND VENUE

22 17. This is an action for declaratory and injunctive relief brought under the Supremacy
23 Clause of the United States Constitution (including in reliance on this Court's equitable powers under
24 *Ex parte Young*, 209 U.S. 123 (1908)), and under 42 U.S.C. § 1983. Defendants California Air Re-
25 sources Board and Steven S. Cliff, in his official capacity as the Executive Officer of the California Air
26 Resources Board (collectively, "CARB"), are charged with implementing and enforcing the standards
27

1 and regulations at issue. Defendant Gavin Newsom, in his official capacity as the Governor of Cali-
2 fornia, is charged with enforcing state law and has directed CARB to take actions related to enforce-
3 ment of the state standards and regulations discussed herein. This Court has jurisdiction to grant the
4 relief sought in this action under 28 U.S.C. §§ 1331, 1343(a)(3), 1367, 2201, and 2202.

5 18. Pursuant to this Court’s supplemental jurisdiction under 28 U.S.C. § 1367, this action
6 further seeks a declaration that CARB’s recent actions to force OEMs into complying with its
7 preempted standards and regulations and to restrict the speech of Plaintiff OEMs and other companies
8 impacted by its actions violate the California Constitution and constitute underground regulations in
9 violation of the California Administrative Procedure Act, Cal. Gov. Code §§ 11340–11361; *see* Cal.
10 Civ. Code § 52.1 (“[a]ny individual whose exercise or enjoyment of rights secured by the Constitution
11 or laws of the United States, or of rights secured by the Constitution or laws of [California]” may sue
12 the persons who violated their rights for declaratory, injunctive, and monetary relief).

13 19. Venue is proper in this District under 28 U.S.C. § 1391(b) because all Defendants main-
14 tain an office and conduct their official duties within this judicial district, and/or a substantial part of
15 the events or omissions giving rise to this action occurred within this judicial district.

16 THE PARTIES

17 20. Plaintiff Daimler Truck North America LLC is a limited liability corporation organized
18 under the laws of the State of Delaware with its principal place of business in the State of Oregon.

19 21. Plaintiff International Motors, LLC is a limited liability corporation organized under the
20 laws of the State of Delaware with its principal place of business in the State of Illinois.

21 22. Plaintiff PACCAR Inc. is a corporation organized under the laws of the State of Dela-
22 ware with its principal place of business in the State of Washington.

23 23. Plaintiff Volvo Group North America LLC is a limited liability corporation organized
24 under the laws of the State of Delaware with its principal place of business in the State of North Caro-
25 lina.

26 24. Each Plaintiff OEM designs, develops, manufactures, and sells heavy-duty trucks.
27
28

1 Plaintiff OEMs each offer heavy-duty trucks in California and in all states that have opted into Cali-
2 fornia's rules under 42 U.S.C. § 7507. These vehicles commonly sell for well over \$100,000 when
3 sold at retail in California, and many thousands of Plaintiff OEMs' heavy-duty trucks are sold in Cali-
4 fornia and other opt-in states each year.

5 25. Under CARB's regulations, all Plaintiff OEMs are subject to CARB's enforcement of
6 emissions standards for new motor vehicles and new motor vehicle engines. In addition, as a regulator,
7 CARB asserts that Plaintiff OEMs (and other manufacturer signatories) are also contractually bound
8 to comply with the now-preempted state law emissions standards pursuant to the Clean Truck Partner-
9 ship. This use of the Clean Truck Partnership, a regulatory partnership originally designed to harmo-
10 nize federal and state law, is an impermissible attempt to enforce preempted standards under the Clean
11 Air Act. As a result of CARB's attempts to enforce these unlawful state standards, Plaintiff OEMs
12 currently suffer and will continue to suffer concrete and particularized injuries, which can be redressed
13 only by this Court's order adjudicating Plaintiff OEMs' obligations under federal and California law.
14 Plaintiff OEMs' injuries are fairly traceable to CARB's conduct and would be redressed by a favorable
15 decision.

16 26. Defendant California Air Resources Board is a branch of the California Environmental
17 Protection Agency, which is an agency of the State of California. The California Health and Safety
18 Code authorizes CARB to promulgate and enforce regulations to control emissions from new motor
19 vehicles and engines. CARB is headquartered in Sacramento, in the State and Eastern District of Cal-
20 ifornia, and held meetings in Sacramento, California regarding Advanced Clean Trucks, Omnibus Low
21 NOx, Advanced Clean Cars II, and upon information and belief, performed official duties related to
22 other regulatory actions discussed herein in Sacramento, California.

23 27. Defendant Steven Cliff is the Executive Officer of the California Air Resources Board.
24 The Executive Officer of CARB is authorized to implement and enforce motor vehicle emission stand-
25 ards in the State of California. This suit is brought against the Executive Officer in his official capacity.
26 The Executive Officer maintains an office in Sacramento, in the State and Eastern District of California,
27 and he performs his official duties in Sacramento, California.

28. Defendant Gavin Newsom is the Governor of the State of California. In addition to directing CARB to enforce the rules at issue here, Governor Newsom has threatened through Executive Order detrimental regulatory treatment and exclusion from government purchase and incentive programs for vehicle and engine manufacturers that do not follow the Clean Truck Partnership or do not certify their products in compliance with preempted CARB standards. This suit is brought against the Governor in his official capacity. The Governor maintains an office in Sacramento, in the State and Eastern District of California, and performs his official duties in Sacramento, California.

FACTUAL AND LEGAL BACKGROUND

I. The Clean Air Act and California Regulation of Heavy-Duty Vehicle Emissions

29. Under Section 202(a) of the Clean Air Act, the EPA Administrator “shall by regulation prescribe ... standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.” 42 U.S.C. § 7521(a)(1).

30. In enacting the Clean Air Act, Congress sought to construct a nationwide regulatory regime focused on limiting emissions of certain pollutants by new motor vehicles. 42 U.S.C. § 7521. Congress entrusted this endeavor to EPA and expressly preempted State enforcement of emissions standards or the imposition of State certification requirements. *See* 42 U.S.C. § 7543(a). Section 209(a) demonstrates Congress’s clear intent to preempt States from adopting or enforcing standards relating to the control of emissions from new motor vehicle engines. *Id.*

31. Specifically, Section 209(a) expressly and unequivocally states that “[n]o State or any political subdivision thereof shall adopt or attempt to enforce any standard relating to the control of emissions from new motor vehicles or new motor vehicle engines subject to this part.” *Id.* In addition, Section 209(a) prohibits states from requiring “certification, inspection, or any other approval relating to the control of emissions ... as a condition precedent” to initial sale or registration of a new vehicle

1 or engine. *Id.*

2 32. Aware of the unique air pollution concerns California faces, however, Congress also
3 included Section 209(b), which allows EPA to grant a waiver of preemption so California can craft its
4 own regulations under EPA’s guidance. 42 U.S.C. § 7543(b). Section 209(b) of the Clean Air Act
5 gives EPA the authority to issue a “waiver” to California to adopt and enforce its own vehicle emissions
6 standards that are “at least as protective of public health and welfare as applicable Federal standards,”
7 if certain statutory criteria are met. 42 U.S.C. § 7543(b). Section 177 of the Clean Air Act allows other
8 states to adopt California’s standards in lieu of the federal standards—in other words, to opt-in to the
9 California program in an identical manner. 42 U.S.C. § 7507. Absent an EPA-approved waiver, the
10 adoption or enforcement of any state law regulating mobile source emissions is expressly preempted
11 under federal law. 42 U.S.C. § 7543(a).

12 33. A preemption waiver granted by EPA under Section 209(b) also allows California to
13 impose a requirement for “certification ... or any other approval relating to the control of emissions ...
14 as a condition precedent to sale”—a practice otherwise forbidden by the second clause of Section
15 209(a). 42 U.S.C. § 7543(a). EPA implemented this statutory prohibition by allowing CARB to man-
16 date conditions precedent where the state has received a preemption waiver for the emission standards
17 applicable to a particular class of vehicles (as opposed to requiring CARB to seek separate preemption
18 waivers for conditions precedent). Final Agency Action Regarding the Motor Vehicle Provisions of
19 the Clean Air Act, Item 6 (Conditions Precedent to the Sale, Titling, or Registration of New Motor
20 Vehicles in California), 50 Fed. Reg. 35,122, 35,123 (Aug. 29, 1985); *see also* California State Motor
21 Vehicle Pollution Control Standards; Waiver of Federal Preemption; Notice of Determination, 55 Fed.
22 Reg. 28,825 (July 13, 1990) (explaining that prior EPA preemption waivers for specific “classes of
23 vehicles and engines, based on California’s standards and/or accompanying enforcement procedures,
24 removes the prohibitions of section 209(a) regarding ... conditions precedent for those classes”). Un-
25 der the California Health and Safety Code, these conditions precedent include a requirement that new
26 vehicles and engines receive approval from CARB before they are sold in the state, known as certifi-
27 cation. Cal. Health & Safety Code, §§ 43151 & 43512; *see also* § 1036.801 “Certification,” California
28

1 Exhaust Emission Standards and Test Procedures for 2004 and Subsequent Model Heavy-Duty Diesel
2 Engines and Vehicles (Sept. 9, 2021) (“September 2021 CARB Heavy-Duty Test Procedures”) (provid-
3 ing definition of “Certification” for purposes of CARB regulatory program), *incorporated by reference*
4 *into* Cal. Code Regs. tit. 13, § 1956.8(b). When successful, certification culminates in an order from
5 CARB approving a particular vehicle or engine for sale in California during that model year. *See*
6 § 1036.801 “Certificate of Conformity,” September 2021 CARB Heavy-Duty Test Procedures (defin-
7 ing the certification document issued by CARB). Opt-in states may also require that manufacturers
8 receive California certification before offering vehicles or engines in their states. *See, e.g.*, 310 Mass.
9 Code Regs. 7.40 (“No person or other entity, including manufacturers, shall ... deliver for sale ... a
10 new vehicle ... in or into Massachusetts unless the vehicle has received a California ARB Executive
11 Order for all applicable requirements of Titles 13 and 17 [California Code of Regulations]”). Sell-
12 ing vehicles in California without a CARB certification is a serious offense that subjects the seller to
13 substantial civil penalties. *See* Cal. Health & Safety Code § 43154(a)(1).

14 34. Despite not having waivers to adopt regulations as required by Section 209(a), relying
15 on *the potential* to obtain preemption waivers from EPA, between 2021 and 2023, CARB adopted a
16 series of standards applicable to the vehicles and engines manufactured by Plaintiff OEMs—including
17 larger trucks, such as tractor-trailers, categorized as “heavy-duty” under the regulations, and more mod-
18 erately sized, generally commercial vehicles categorized as “medium-duty.” But now, all of CARB’s
19 standards applicable to trucks and engines are preempted by federal law, either because the specific
20 regulatory program was explicitly preempted due to Congressional action or because CARB acted
21 without a waiver, and in fact, never received a waiver for the program at all.

22 35. *First*, as explained further below, the President has signed joint resolutions of Congress
23 that expressly preempted the following standards under the Clean Air Act:

24 a. The **Advanced Clean Trucks Regulation** requires manufacturers to sell
25 increasing percentages of zero-emissions vehicles year-over-year, or to buy credits from
26 other entities that exceeded their own percentage obligations. *See* Cal. Code Regs. tit.
27 13, §§ 1963.1, 1963.2. In April 2023, under the Biden Administration, EPA granted a
28

1 waiver request for the then-current version of CARB’s Advanced Clean Trucks, along
2 with three other regulatory programs for which CARB had requested waivers (heavy-
3 duty emission warranty requirements, zero-emission airport shuttles, and certification
4 of zero-emission powertrains). Notice of Decision, Advanced Clean Trucks Waiver of
5 Preemption, 88 Fed. Reg. 20688, 20689 (Apr. 6, 2023). As discussed further below, on
6 June 12, 2025, the President signed legislation disapproving and abrogating this waiver
7 for the Advanced Clean Trucks and other standards. At signing, the President stated
8 that Advanced Clean Trucks and the other standards covered by the invalidated waiver
9 were “fully and expressly preempted by the Clean Air Act and cannot be implemented.”
10 *See* Statement by the President, The White House (June 12, 2025) (“June 12 Statement
11 by the President”), <https://perma.cc/Y4JJ-4HLS>.⁴

12 b. The **Omnibus Low NOx Regulation** requires manufacturers to reduce
13 heavy-duty vehicle emissions of nitrogen-oxide (NOx) and particulate matter. *See* Cal.
14 Code Regs. tit. 13, § 1956.8. This regulatory package also included extensive changes
15 to other CARB standards affecting heavy-duty engines and vehicles. *See* CARB, Final
16 Regulation Order, Title 13, at 3, Docket No. EPA-HQ-OAR-2022-0332,
17 <https://www.regulations.gov/document/EPA-HQ-OAR-2022-0332-0005>.⁵ In January
18 2025, just before the inauguration of the new President, EPA granted a waiver request

19 ⁴ Despite Congress withdrawing the waiver of preemption that authorized Advanced Clean Trucks un-
20 der the Clean Air Act, CARB recently approved new amendments to those standards changing the
21 availability of credits used for compliance with EV mandates. *See* CARB, CARB approves amend-
22 ments to clean truck standards to provide flexibility while maintaining emissions benefits (July 24,
23 2025), <https://perma.cc/8D4R-A26K>. CARB cannot adopt or attempt to enforce the amended version
24 of Advanced Clean Trucks until CARB receives a waiver from EPA under Section 209 of the Clean
Air Act. And because EPA cannot issue a waiver for Advanced Clean Trucks without a subsequent
act of Congress, *see* 5 U.S.C. § 801(b)(2), the Advanced Clean Trucks amendments are also fully
preempted under Section 209.

25 ⁵ Noting that the rulemaking amends the following sections of title 13, California Code of Regulations:
26 1900, 1956.8, 1961.2, 1965, 1968.2, 1971.1, 1971.5, 2035, 2036, 2111, 2112, 2113, 2114, 2115, 2116,
27 2117, 2118, 2119, 2121, 2123, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2133, 2137, 2139, 2140,
2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2423, and 2485; and adopts title 13, California
28 Code of Regulations, sections 2139.5, 2166, 2166.1, 2167, 2168, 2169, 2169.1, 2169.2, 2169.3, 2169.4,
2169.5, 2169.6, 2169.7, 2169.8, and 2170.

1 for CARB’s Omnibus Low NO_x—covering both the criteria pollutant standards and the
2 other regulatory modifications included in the waiver submission. Notice of Decision,
3 Omnibus Low NO_x Regulation Waiver of Preemption, 90 Fed. Reg. 643 (Jan. 6, 2025).
4 As discussed further below, on June 12, 2025, the President signed legislation disap-
5 proving and abrogating that waiver. At signing, the President stated that Omnibus Low
6 NO_x was “fully and expressly preempted by the Clean Air Act and cannot be imple-
7 mented.” *See* June 12 Statement by the President.

8 c. The **Advanced Clean Cars II Regulation** primarily applies to light-duty
9 vehicles (*e.g.*, cars and pickup trucks) but includes modifications to several other regu-
10 latory programs that apply to heavy-duty vehicles and engines. For heavy-duty vehicles
11 and engines, Advanced Clean Cars II modified standards for evaporative emissions, Cal.
12 Code Regs. tit. 13, § 1976, and refueling emissions, Cal. Code Regs. tit. 13, § 1978. *See*
13 Advanced Clean Cars II, Cal. Off. of Admin. Law Approval (“ACC II OAL Approval”),
14 at 227-30, Docket No. EPA-HQ-OAR-2023-0292, [https://www.regulations.gov/docu-](https://www.regulations.gov/document/EPA-HQ-OAR-2023-0292-0016)
15 [ment/EPA-HQ-OAR-2023-0292-0016](https://www.regulations.gov/document/EPA-HQ-OAR-2023-0292-0016). The on-board diagnostics standards applicable
16 to medium-duty vehicles were also modified in Advanced Clean Cars II. Cal. Code
17 Regs. tit. 13, § 1968.2, ACC II OAL Approval at 284–304. EPA approved the waiver
18 for Advanced Clean Cars II, including the changes affecting heavy-duty vehicles and
19 engines, on January 6, 2025. Notice of Decision, Advanced Clean Cars II Waiver of
20 Preemption, 90 Fed. Reg. 642 (Jan. 6, 2025). As discussed further below, on June 12,
21 2025, the President signed legislation disapproving and abrogating this waiver. In a
22 statement at signing, the President stated that Advanced Clean Cars II was “fully and
23 expressly preempted by cannot be implemented.” *See* June 12 Statement by the Presi-
24 dent. As a result, the evaporative emissions and refueling emissions standards applica-
25 ble to heavy-duty vehicles and the medium-duty on-board diagnostics standards, which
26 were included in Advanced Clean Cars II, now lack a preemption waiver for the version
27 of the standards currently enacted in California. These standards are thus preempted
28

and invalid.

36. *Second*, California has sought to implement certain standards for which it has never obtained an EPA waiver of federal preemption.

a. The **Advanced Clean Fleets Regulation** requires, among other things, that manufacturers exclusively sell zero-emission vehicles in California beginning in model year 2036. Cal. Code Regs. tit. 13, § 2016. CARB submitted a waiver request for Advanced Clean Fleets to EPA in July 2024; it then withdrew the request in January 2025. *See* Withdrawal of California’s Request for a Waiver (Jan. 13, 2025), Docket No. EPA-HQ-OAR-2023-0589, <https://www.regulations.gov/docket/EPA-HQ-OAR-2023-0589>.⁶ EPA has not granted a preemption waiver permitting CARB to implement the Advanced Clean Fleets Rule. As a result, it is preempted by the Clean Air Act.

b. The **“Phase 2” Greenhouse Gas Regulations** reduced the greenhouse gas (GHG) emissions standards for heavy-duty vehicles and partially aligned California’s GHG standards for 2021 and subsequent model years with the federal Phase 2 Greenhouse Gas standards albeit with some differences. *See* CARB, Omnibus Regulation Clean Air Act Authorization Request Support Document, 37 (Jan. 31, 2022), <https://perma.cc/7GSJ-QTBJ>. CARB previously signaled its intent to submit a waiver request to EPA for its Phase 2 GHG emissions standards, but there is no public record that CARB has submitted such a request. *See id.* at 37 n.38 (“CARB will submit a separate waiver request for the California Phase 2 GHG Regulation”); EPA, Vehicle Emissions California Waivers and Authorizations, <https://www.epa.gov/state-and-local-transportation/vehicle-emissions-california-waivers-and-authorizations>. Despite

⁶ More recently, CARB stated in federal court that it intends to propose repealing most of Advanced Clean Fleets to settle a pending challenge to those rules, although it has not indicated that it will repeal the model year 2036 100% zero-emission vehicle sale requirement most relevant here. Stipulation and Request to Hold Case in Abeyance Pending Outcome of Rulemaking, *Cal. Trucking Ass’n v. Cliff*, No. 2:23-cv-02333 (E.D. Cal. Apr. 25, 2025). A CARB Member explained, “without federal approval, the regulation would have been a legal zombie: dead on its feet, but still scaring the living.” Dean Florez, Why California recently revised its clean air regulations for zero-emission trucks, *The Sacramento Bee* (May 6, 2025), <https://www.sacbee.com/opinion/op-ed/article305738891.html>.

1 the lack of preemption waiver, CARB’s Phase 2 Greenhouse Gas emissions standards
2 facially apply to manufacturers beginning in model year 2021. *See* Cal. Code Regs. tit.
3 17, § 95663. In one of CARB’s recent directives to industry, discussed further below,
4 CARB stated that it “will continue to accept and process certification applications ...
5 under the certification requirements” of the multiple CARB regulations, including the
6 Phase 2 Greenhouse Gas program. May 23, 2025 MAC at 3.

7 c. The **Heavy-Duty On-Board Diagnostic Regulations** apply to the self-
8 diagnostic systems incorporated into the computers of vehicles to monitor vehicle and
9 engine components that can impact emissions performance. *See* Cal. Code Regs. tit. 13,
10 § 1971.1. California has not obtained a waiver for its standards at section 1971.1 since
11 2016, which only covered amendments to the rule through 2013. *See* 81 Fed. Reg.
12 78,149 (Nov. 7, 2016). CARB amended the standards in 2016⁷ and 2019.⁸ Because
13 these later amendments lack waivers, no preemption waiver exists that covers the on-
14 board diagnostic standards currently adopted under California law.

15 16 **II. Regulatory Uncertainty and the Clean Truck Partnership**

17 37. As California promulgated the aforementioned standards, the heavy-duty truck and en-
18 gine manufacturers raised serious concerns about the legality of CARB’s actions and the technical
19 feasibility of meeting CARB’s standards within the limited timeline allotted. Among others, two ob-
20 jections are particularly salient here.

21 38. First, Omnibus Low NOx was dramatically different from the federal criteria pollutant
22 emissions standards. As EPA noted in its rulemaking for criteria pollutant standards, Omnibus Low
23 NOx imposed emissions standards “even more stringent” than the *most* stringent rules considered by
24

25 _____
26 ⁷ CARB, On-Board Diagnostic Systems II, <https://perma.cc/TV8H-HKLB> (documenting adoption of
standards on July 25, 2016).

27 ⁸ CARB, Heavy-Duty On-Board Diagnostic System Requirements 2018, [https://perma.cc/P65V-](https://perma.cc/P65V-YR8Q)
28 YR8Q (documenting adoption of standards on Oct. 3, 2019).

1 EPA.⁹ On behalf of its members, the industry trade association (the Truck and Engine Manufacturers
2 Association (EMA)) expressed concerns during CARB’s rulemaking process that the Omnibus Low
3 NOx emissions standards were unachievable, urging CARB to forego Omnibus Low NOx and instead
4 “work in good faith with all stakeholders to develop a cost-effective *nationwide* [heavy-duty vehicle
5 and engine] low-NOx program to take effect in 2027.” EMA, Comments on CARB’s Heavy-Duty
6 Engine and Vehicle Omnibus Regulation and Associated Amendments (Aug. 13, 2020) at 4 (emphasis
7 added).¹⁰

8 39. Second, product development in the heavy-duty truck and engine requires long lead
9 times—a fact so well-recognized that the Clean Air Act itself specifically requires at least four years
10 of lead time and a three-year regulatory stability period for heavy-duty emissions standards. 42 U.S.C.
11 § 7521(a)(3)(C). But when CARB promulgated new emissions standards in Omnibus Low NOx, it did
12 not provide the requisite statutory lead time. Instead, CARB adopted the rules on December 22, 2021,
13 which then became effective in model year 2024—providing only two years of lead time.¹¹

14 40. Consequently, EMA filed suit against CARB asserting that Omnibus Low NOx did not
15 comply with the Clean Air Act’s mandated lead time. Complaint at ¶ 3, *Engine Mfrs. Ass’n v. Cal. Air*
16 *Resources Bd.*, No. 2:22-cv-03663-JFW-PVC (C.D. Cal. May 27, 2022). When EPA commenced a
17 waiver proceeding regarding Omnibus Low NOx and accepted comments on the lead time issue, EMA
18 withdrew its lawsuit.¹²

19 41. Shortly thereafter, CARB publicly wrote to EMA stating that in recognition of EMA
20

<https://www.regulations.gov/document/EPA-HQ-OAR-2022-0332-0005>.

27 ¹² Press Release, EMA, Truck & Engine Manufacturers Withdraw Lawsuit on Leadtime Requirement
28 for Heavy-Duty Emissions Standards (Aug. 11, 2022), <https://perma.cc/LZ3X-RJJZ>.

1 dropping its litigation, CARB sought “discussion” with EMA and was open to “exploring areas of
2 alignment between state and federal combustion rules”—a potential path out of the regulatory quagmire
3 for heavy-duty truck and engine manufacturers.¹³ Nine months later, in July 2023, CARB announced
4 the Clean Truck Partnership, a document styled as an “Agreement” between a regulator—CARB—on
5 one hand, and a regulated industry—heavy-duty truck and engine manufacturers, along with their trade
6 association EMA—on the other.¹⁴ The Clean Truck Partnership outlined a plan for CARB to undertake
7 several of the regulatory actions sought by industry. First, CARB stated that it would provide four-
8 year lead-time for future emission standards, as EMA had pursued in its litigation against CARB. Ex.
9 A (CTP), ¶ 5. Second, CARB agreed to propose amendments that would harmonize Omnibus Low
10 NOx emissions standards with EPA’s federal standards, subject to certain limited exceptions—in ef-
11 fect, agreeing to a more achievable NOx standard that would apply nationwide, as EMA had proposed
12 during the Omnibus Low NOx rulemaking. Ex. A (CTP), ¶¶ 1(iii), 7. And third, CARB agreed to
13 work with industry to try to make the mandates contained in Advanced Clean Trucks more feasible.
14 Ex. A (CTP), App’x C, ¶ B. The Clean Truck Partnership was thus intended to help harmonize and
15 facilitate compliance with state and federal heavy-duty vehicle emission standards.

16 42. Although the document was labeled as an “agreement,” the Clean Truck Partnership
17 imposed new regulatory requirements on manufacturers. For this reason, the U.S. Department of Jus-
18 tice has described the “agreement” as an independent “regulatory mechanism by which CARB attempts
19 to enforce” its preempted emissions standards. Ex. B (Aug. 7, 2025 DOJ Letter), at 2. The Clean
20 Truck Partnership dictated that under certain circumstances where CARB was found to lack authority
21 for Advanced Clean Trucks, Omnibus Low NOx, or the 100 percent zero-emission vehicle sales re-
22 quirement of Advanced Clean Fleets, manufacturers would still have to comply with those standards.
23 Ex. A (CTP), ¶ 2. Next, the Clean Truck Partnership provided that “California will maintain its certi-
24 fication program,” asserting CARB’s authority to impose certification requirements on manufacturers.

25 _____
26 ¹³ Letter from Steven S. Cliff, Executive Officer, CARB, to Jed R. Mandel, President, EMA (Oct. 14,
2022), <https://perma.cc/3RQF-XXV2>.

27 ¹⁴ Press Release, CARB and truck and engine manufacturers announce unprecedented partnership to
28 meet clean air goals (July 6, 2023), <https://perma.cc/85J7-U75K>.

Ex. A (CTP), App’x B, at 1. By creating a regulatory structure that manufacturers had to follow even when CARB had lost federal authority due to “the outcome of any litigation challenging the waivers or authorizations for those regulations or of CARB’s overall authority to implement those regulations,” Ex. A (CTP), ¶ 2, the Clean Truck Partnership ostensibly became a buttress for the new CARB emissions standards and certification obligations applicable to the highly regulated truck industry. Under scoring that the Clean Truck Partnership is fundamentally a regulatory scheme rather than a private agreement, the Clean Truck Partnership does not provide any enforcement mechanism or private right of action among the industry signatories for noncompliance—EMA and manufacturers cannot impose penalties on each other, nor can they deny each other certifications to sell trucks or engines.

43. Furthermore, the Clean Truck Partnership created a new category of regulatory restrictions: limits on the rights of manufacturers and EMA to speak freely and petition the government. The advocacy-limiting mandates that CARB included in the Clean Truck Partnership prohibit EMA and manufacturers from challenging enumerated CARB standards, including Omnibus Low NOx, Advanced Clean Trucks, and the Advanced Clean Fleets 100 percent zero-emission vehicle sales requirement. To that end, the Clean Truck Partnership dictates: “[manufacturers] will not (i) challenge CARB’s issuance of the regulations set forth in Appendix B¹⁵; (ii) file a Petition for Review or otherwise challenge any U.S. EPA waiver or authorization granted for such regulations; (iii) file amicus briefs supporting challenges to such waivers or authorizations, or such regulations; or (iv) support stay motions or similar motions practice challenging such waiver or authorization decisions, or such regulations.” Ex. A (CTP) ¶ 4. As a result, the Clean Truck Partnership purports to insulate the State and its emissions standards from legal challenges.

44. The Clean Truck Partnership further limits “advocacy” by EMA and manufactures in any state that is considering adopting CARB’s Omnibus Low NOx or Advanced Clean Trucks. Ex. A (CTP) App’x D, ¶ A. In that regard, it explicitly imposes a requirement on EMA and manufacturers to

¹⁵ Omnibus Low NOx, Advanced Clean Trucks, the 100 percent zero-emission sales requirement in Advanced Clean Fleets, the Zero Emission Airport Shuttle regulation, the Zero Emission Powertrain Certification Procedure and its incorporated standards and test procedures, the 2018 Heavy-Duty Warranty Amendments, and the Standards and Test Procedures for 2004 and Subsequent Model Year Heavy-Duty Diesel Engines and Vehicles (as amended April 18, 2019).

1 “support or not oppose the adoption of CARB’s Omnibus [Low NOx] regulations in any prospective
2 Section 177 states” for model year 2027 and later, and to remain “neutral ... in response to any pro-
3 spective Section 177 States’ proposals to consider adopting CARB’s [Advanced Clean Trucks] regu-
4 lations.” Ex. A (CTP) App’x D, ¶¶ C, E.

5 45. In sum, through the Clean Truck Partnership, CARB sought to impose industry-wide
6 emissions standards and certification requirements, in a manner that would insulate those standards
7 from litigation challenging CARB’s regulatory authority, from any future industry criticism, and from
8 any potential industry-supported judicial review. CARB imposed the Clean Truck Partnership in its
9 capacity as an industry regulator, not in its capacity as a market participant.

10 46. In December 2024, the American Free Enterprise Chamber of Commerce brought fed-
11 eral litigation against CARB and the signatories to the Clean Truck Partnership (including Plaintiff
12 OEMs), seeking a declaratory judgment that the Clean Truck Partnership is preempted and unlawful
13 and an order enjoining the Clean Truck Partnership’s enforcement. *See Am. Free Enter. Chamber of*
14 *Com. v. Engine Mfrs. Ass’n*, No. 3:24-cv-50504 (N.D. Ill. Dec. 16, 2024). Responsive pleadings cur-
15 rently are due August 14, 2025.

16 17 **III. The Federal Government Enacts Law Preempting CARB’s Standards**

18 47. CARB and the federal government have now adopted diametrically opposed positions
19 about what law, regulations, and standards apply to heavy-duty truck manufacturers—including
20 whether the Clean Truck Partnership is a lawful mechanism for CARB to compel compliance with
21 now-preempted California standards.

22 48. As explained above, California’s authority to regulate heavy-duty vehicle and engine
23 emissions depended on Clean Air Act preemption waivers granted by EPA. In June 2025, the President
24 signed a Joint Resolution of Congress under the Congressional Review Act that expressly stripped
25 California’s preemption waivers for Advanced Clean Trucks, Omnibus Low NOx, and Advanced Clean
26 Cars II. In response, CARB now points to the Clean Truck Partnership as a source of its ongoing
27 authority to enforce compliance with its standards, while the federal government expressly includes
28

1 the Clean Truck Partnership within the category of preempted regulatory actions.

2 49. On February 19, 2025, EPA submitted the waiver decisions for Advanced Clean Trucks,
3 Omnibus Low NO_x, and Advanced Clean Cars II to Congress as rules subject to the Congressional
4 Review Act. *See* 5 U.S.C. §§ 551(4), 804(3). The Congressional Review Act enables Congress to
5 enact joint resolutions invalidating new rules adopted by federal agencies within a review period trig-
6 gered upon the submission of the rule to Congress. 5 U.S.C. §§ 801–808. In May 2025, both chambers
7 of Congress voted to pass joint resolutions invalidating the Advanced Clean Trucks, Omnibus Low
8 NO_x, and Advanced Clean Cars II waiver decisions. *See* H.R.J. Res. 87, 119th Cong. (2025); H.R.J.
9 Res. 88, 119th Cong. (2025); H.R.J. Res. 89, 119th Cong. (2025). President Trump signed the joint
10 resolutions on June 12, 2025. *See* Statement by the President, The White House (June 12, 2025)
11 (“June 12 Statement by the President”), <https://perma.cc/M4Q4-28BM>. Once Congress passed and the
12 President signed the measures repealing the recent EPA waivers, CARB lost authority under the Clean
13 Air Act to adopt and enforce its standards. *See Diamond Alt. Energy, LLC v. EPA*, 145 S. Ct. 2121,
14 2131 n.1 (2025) (“Acting under the Congressional Review Act, Congress recently passed and the Pres-
15 ident signed legislation to block ... California regulations.”).

16 50. As a result, the federal government has taken the position that Advanced Clean Trucks,
17 Omnibus Low NO_x, and Advanced Clean Cars II are “fully and expressly preempted by the Clean Air
18 Act and cannot be implemented.” June 12 Statement by the President; *see also* 5 U.S.C. § 801(b)(1).
19 The President stated that the resolutions make clear that “California’s attempts to impose an electric
20 vehicle mandate, regulate national fuel economy, and regulate greenhouse gas emissions are not eligi-
21 ble for waivers of preemption under section 209 of the Clean Air Act.” June 12 Statement by the
22 President. Further, the Advanced Clean Trucks, Omnibus Low NO_x, and Advanced Clean Cars II
23 waivers cannot be reissued in “substantially the same” form unless authorized later by another legisla-
24 tive action by Congress. *Id.*; 5 U.S.C. § 801(b)(2). Therefore, pursuant to federal law, CARB’s Ad-
25 vanced Clean Trucks, Omnibus Low NO_x, and Advanced Clean Cars II are now preempted and void
26 ab initio and have no effect. *See Diamond Alt. Energy*, 145 S. Ct. at 2135 n.3 (explaining that “the
27 result from setting aside EPA’s approval of the California regulations” is that “California may not
28

1 enforce its greenhouse-gas emissions limits and electric-vehicle mandate for new vehicle fleets”).

2 51. Furthermore, on August 7, 2025, the U.S. Department of Justice sent a letter to heavy-
3 duty truck and engine manufacturers reiterating the federal government’s position that the Congres-
4 sional Review Act resolutions preempted CARB’s standards, and further stating that the Clean Truck
5 Partnership is itself preempted as an attempt to enforce emissions standards that lack a waiver under
6 Section 209(b) of the Clean Air Act. As DOJ writes, “The Clean Truck Partnership ... compels man-
7 ufacturers to comply with CARB’s ongoing enforcement of the Omnibus [Low NOx] and [Advanced
8 Clean Trucks] regulations[.]” Ex. B (Aug. 7, 2025 DOJ Letter), at 2. In the letter, DOJ commands
9 Plaintiff OEMs to “immediately cease and desist your compliance with both the Clean Truck Partner-
10 ship and its preempted state vehicle emission regulations.” *Id.*

11 12 **IV. California Continues to Enforce Preempted Emissions Standards**

13 52. And yet, while the federal government demands that Plaintiff OEMs do one thing, Cal-
14 ifornia directs OEMs to do another. California has taken the position that Congress’s waiver-disap-
15 proval resolutions were “reckless, politically motivated, and illegal attacks on California,”¹⁶ and has
16 made clear that it will continue to attempt to enforce the requirements included in Advanced Clean
17 Trucks, Omnibus Low NOx, and Advanced Clean Cars II, including the vehicle and engine certification
18 requirements.

19 53. On June 12, 2025, California sued EPA and the President seeking an order “declar[ing]
20 that the [Congressional Review Act] Resolutions have no effect on the status or enforceability of state
21 emissions control programs.” Complaint at 4, *California v. EPA*, No. 4:25-cv-04966 HSG (N.D. Cal.
22 June 12, 2025). California alleges, among other things, that Congress’s actions were *ultra vires*, vio-
23 lated the Congressional Review Act and the Administrative Procedures Act, and flouted the Constitu-
24 tion’s structural guarantees regarding separation of powers and federalism. *Id.* at 27–39. The State has

25
26
27 ¹⁶ See Press Release, Governor Gavin Newsom, Assault on California continues: Governor Newsom
28 sues Trump over illegal attempt to revoke state’s clean air policies (June 12, 2025),
<https://perma.cc/L3Q8-S8QJ/>.

1 not sought a temporary restraining order or preliminary injunction. The initial case management con-
2 ference is currently set for September 16, 2025, and as of this filing no further substantive court dates
3 have been set in that case.

4 54. While its legal dispute is pending, California has stated that it will continue to enforce
5 the preempted emissions standards included in Advanced Clean Trucks, Omnibus Low NOx, and Ad-
6 vanced Clean Cars II, and require manufacturers to certify regulatory compliance before selling vehi-
7 cles in California. To that end, California has repeatedly asserted that it will use the Clean Truck
8 Partnership, which was intended to harmonize compliance with state and federal law, to compel the
9 industry to comply with now-preempted California emissions standards over federal law.

10 55. CARB cannot use the Clean Truck Partnership as a backdoor to enforce California's
11 preempted emissions standards. Even if it could, CARB has not met—and indeed cannot meet—sev-
12 eral of its own obligations under the Clean Truck Partnership. As a result, CARB cannot use the Clean
13 Truck Partnership to force the industry to comply with California's emissions standards.

14 56. For one thing, the Clean Truck Partnership requires CARB to substantively amend Ad-
15 vanced Clean Trucks and Omnibus Low NOx, largely for the purpose of harmonization of state and
16 federal emissions standards. *See* Ex. A (CTP) App'x A, B. As explained above, however, the President
17 signed Joint Resolutions of Congress under the Congressional Review Act that expressly revoked Cal-
18 ifornia's preemption waivers for Advanced Clean Trucks and Omnibus Low NOx. Following the sig-
19 nature of these Joint Resolutions into law, pursuant to the Congressional Review Act, EPA cannot
20 reissue CARB's waivers for those standards without a subsequent act of Congress expressly permitting
21 such action. 5 U.S.C. § 801(b)(2). As a result, CARB is statutorily foreclosed from meeting its obli-
22 gation under the Clean Truck Partnership to amend Advanced Clean Trucks and Omnibus Low NOx.
23 If CARB tries to do so, such attempts will be meaningless as California would be preempted from
24 enforcing those rules, amended or otherwise. In particular, CARB's commitment in the Clean Truck
25 Partnership to align the emissions standards in Omnibus Low NOx with EPA's corresponding emis-
26 sions standards is now impossible. CARB has not, and cannot, fulfill this obligation consistent with
27 federal law.

57. For another, when CARB signed the Clean Truck Partnership, it also committed “to work together” with manufacturers “to resolve any issues that may warrant regulatory amendments to either the Omnibus or ACT regulations.” Ex. A (CTP) App’x D, ¶ G. But CARB recently amended Advanced Clean Trucks without engaging with the industry in the manner contemplated by Clean Truck Partnership or addressing the industry’s objections and concerns filed during the comment process. *See* EMA, Comments on CARB’s Proposed Amendments to the Advanced Clean Trucks Regulations and the Zero-Emission Powertrain Certification Test Procedure (July 14, 2025).¹⁷ CARB has also refused to work with the manufacturers to resolve issues related to infrastructure and customer demand that undermine the viability of Advanced Clean Trucks. Among other things, CARB has proposed to withdraw the sections of Advanced Clean Fleets that would have required trucking fleets to purchase zero-emission trucks. *See supra* note 6. In other words, CARB has removed the buy-side requirement corresponding to the sales mandates imposed on manufacturers by Advanced Clean Trucks, thereby making manufacturer compliance with Advanced Clean Trucks even more challenging.

58. Furthermore, CARB did not abide by its commitment in the Clean Truck Partnership to provide manufacturers with three years to make up a shortfall in the proportion of zero-emission vehicles required to be sold pursuant to Advanced Clean Trucks. The Clean Truck Partnership stated that CARB “will propose to modify [Advanced Clean Trucks] to lengthen the number of years a manufacturer has to make up a deficit from one year to three years.” Ex. A (CTP) App’x C, ¶ B. But the standards as adopted did not provide the promised three-year make-up period. Instead, it only allowed manufacturers to carry over 30 percent of the deficit from year-to-year—a material restriction not contemplated by the Clean Truck Partnership. *See* Cal. Code Regs. tit. 13, § 1963.3(b) (providing that “[i]f the net deficit balance is more than 30 percent of the deficits generated from the most recent model year, the net deficit must be reduced to below 30 percent by the end of the first and second years of the

¹⁷ Available to download at https://www.arb.ca.gov/lispub/comm/iframe_bcomdisp.php?listname=2025actpooling&comment_num=523&virt_num=11. *See also* Press Release, CARB approves amendments to clean truck standards to provide flexibility while maintaining emissions benefits (July 24, 2025), <https://perma.cc/8D4R-A26K>.

1 makeup period.”).

2 59. Because CARB has not met numerous commitments under the Clean Truck Partnership,
3 CARB is foreclosed from using the Clean Truck Partnership to force the industry to comply with
4 CARB’s preempted standards.

5 60. Notwithstanding the foregoing, CARB has stated its intent to enforce its preempted
6 standards in multiple ways, each of which are independently preempted by the Clean Air Act, which,
7 again, expressly preempts not only the adoption of state emissions standards for which there is no
8 federal waiver, but “attempt[s] to enforce” preempted standards as well. 42 U.S.C. § 7543(a). Fur-
9 thermore, those attempts to enforce purport to rely on the Clean Truck Partnership—further underscor-
10 ing the status of that document as a regulation in and of itself, which CARB is using, in effect, to
11 circumvent the Clean Air Act and to enforce the preempted state standards.

12 61. **Manufacturers Advisory Correspondence.** On May 23, 2025, CARB issued a Man-
13 ufacturers Advisory Correspondence (“MAC”) document styled as “Regulatory Guidance” in response
14 to the Congressional resolutions disapproving the prior preemption waivers. May 23, 2025 MAC. The
15 directive states that the “Congressional resolutions of disapproval ... are the result of illegal actions
16 and are thus invalid,” and that the disapproved standards remain “applicable to manufacturers.” *Id.* at
17 1. The MAC goes on to state that CARB “will continue to accept and process certification applica-
18 tions,” justifying this as “necessary” to “facilitate meeting the commitments of the Clean Truck Part-
19 nership.” *Id.* at 2; *see also id.* at 3 (“CARB will continue to accept and process certification applications
20 for model year 2025 and 2026 model year medium- and heavy-duty vehicles under the certification
21 requirement of the Heavy-Duty Engine and Vehicle Omnibus regulation[.]”). California has thus taken
22 the position that compliance with CARB’s emissions standards and their related conditions precedent
23 to sale are required by the Clean Truck Partnership, even though the underlying regulations establishing
24 those emissions standards have been preempted. This further demonstrates that the Clean Truck Part-
25 nership itself operates as a regulation, as well as an attempt to enforce CARB’s preempted emission
26 standards.

27 62. CARB’s directive further requires compliance with the preempted standards to “ensure
28

the requirements of certification are met to enable lawful vehicle sales in California” under the California Health and Safety Code, *id.* at 2, citing statutory provisions that a “person shall not offer for sale ... a new motor vehicle ... unless the motor vehicle ... has been certified” under California law. Cal. Health & Safety Code § 43151. Notably, violations of this section can incur penalties of up to \$48,788 “for each such action.” Cal. Health & Safety Code § 43154(a)(1).¹⁸ Thus, CARB has threatened to impose substantial fines against any manufacturer who sells vehicles in California without a CARB certificate, again notwithstanding the fact that the Clean Air Act expressly prohibits such certifications in the absence of a waiver. 42 U.S.C. § 7543(a); *see also* CARB, CARB approves amendments to clean truck standards to provide flexibility while maintaining emissions benefits (July 24, 2025), <https://perma.cc/8D4R-A26K> (“The [May 23, 2025 MAC] explained that CARB would continue accepting and processing certification applications for 2026 models to ensure continuity and enable lawful vehicle sales in California.”).

63. **Executive Order N-27-25.** On June 12, 2025, Governor Newsom issued Executive Order N-27-25, which described the waiver-disapproval resolutions as part of “President Trump’s war on California”¹⁹ and directed CARB to implement the Clean Truck Partnership—which incorporates the emissions standards included in Advanced Clean Trucks, Omnibus Low NOx, and Advanced Clean Cars II—and report “manufacturer progress towards those commitments” to the Governor semi-annually. Executive Order N-27-25 stated that manufacturers that continue to certify compliance with California’s preempted standards will be “prioritize[d] ... in government vehicle procurement decisions,” will receive priority “funding” to “support the purchase of zero-emission vehicles” and directed CARB to identify other “opportunities for special considerations and flexibilities for” manufacturers that comply with the preempted standards when crafting future regulations. Executive Order N-27-25, <https://perma.cc/9HZG-EHRV>.

¹⁸ The statutory penalty is adjusted annually for inflation. *See* CARB, Memorandum to Enforcement Division Staff, Increase in Maximum Penalties Based on 2024 California Consumer Price Index (Feb. 21, 2025), <https://perma.cc/YG4F-9T7Q>.

¹⁹ *See* Press Release, Gov. Gavin Newsom, Governor Newsom signs executive order doubling down on state’s commitment to clean cars and trucks, kickstarts next phase of leadership (June 12, 2025), <https://perma.cc/HHM4-CPXY>.

64. By contrast, none of those privileges or opportunities will be extended to manufacturers who do not follow the standards “regardless of the status of those regulations under federal law.” Executive Order N-27-25. Instead, Executive Order N-27-25 suggests that such manufacturers will be put on California’s “manufacturer purchasing restriction list,” as indeed California has done to disfavored vehicle manufacturers during a prior dispute over whether California’s emissions standards were preempted. *See, e.g.,* David Shepardson, *California to Stop Buying GM, Toyota and Fiat Chrysler Vehicles Over Emissions Fight*, Reuters (Nov. 18, 2019), <https://www.reuters.com/article/idUSL2N27Y0HU/> (reporting that Governor Newsom “halt[ed] all purchases of new vehicles for state government fleets from” manufacturers that did not agree with CARB’s positions in preemption litigation). The California Executive Order thus purports to adopt and enforce California’s separate state emissions regulatory regime in direct conflict with federal law.

V. Plaintiff OEMs are Irreparably Injured as a Result of California’s Actions

65. With the federal government and California taking irreconcilable positions on the enforceability of CARB’s standards, Plaintiff OEMs face both current and imminent injuries from two sources: California’s attempt to enforce the preempted standards and California’s threats to punish Plaintiff OEMs based on their speech.

a. Injury From California’s Enforcement of Preempted Emissions Standards

66. California appears to be intent on acting *ultra vires*. The federal government has acted to expressly preempt CARB’s standards, and California is prohibited by the Clean Air Act from attempting to enforce its heavy-duty emissions standards. Yet CARB has announced that it will nevertheless enforce the preempted standards. For example, in the May 23, 2025 MAC, CARB reiterated that manufacturers will need to obtain a model year 2026 California certification “to enable lawful vehicle sales,” May 23, 2025 MAC at 2, implicitly threatening steep penalties for any violations, *see* Cal. Health & Safety Code §§ 43151, 43154(a)(1) (imposing penalties for selling without a CARB certificate).

67. Against this backdrop, Plaintiff OEMs urgently need clarity regarding the law and emission standards that apply to its vehicles and engines for model year 2026. To adequately plan product production and allocation, Plaintiff OEMs must know which vehicles they are authorized to sell, and *where*, well in advance of the start of a model year on January 1. And applying for and receiving CARB certifications takes months. As noted previously, CARB’s own description of the process lays out a timeline of up to sixty days, at the conclusion of which the manufacturer may receive a certification—or only “substantive feedback ... about what further information is needed,” heralding an even longer certification process.²⁰ Thus, working backwards from the January 1, 2026 start of the model year, to allow adequate planning time, Plaintiff OEMs must know within a matter of weeks whether they must seek a model year 2026 certification from CARB. Without regulatory certainty, Plaintiff OEMs are unable to engage in meaningful product planning, reducing their ability to deliver to customers the products they need and want.

68. Applying for a CARB certification entails a substantial investment of time and resources on the part of Plaintiff OEMs. In addition to the direct cost of paying CARB certification fees, obtaining a certification involves expensive emissions testing to ensure compliance with CARB standards—testing which, to generate the requisite emissions testing results, needs to start roughly eight months before the submission of a certification application. For example, Plaintiff OEMs must “age” engines to simulate real-world wear and tear to ensure that certain regulatory requirements are met—an expensive process that uses emission testing laboratories that could otherwise be used for research and development. And once an application is submitted, CARB can take months to provide a certification. As a result, the certification process can take upwards of a year, and it requires Plaintiff OEMs to invest substantial resources.

b. Injury From California’sSuppressions of Plaintiff OEMs’ Free Speech

69. California is suppressing Plaintiff OEMs’ speech and petitioning rights to insulate State officials from judicial oversight. To accomplish this, California has threatened Plaintiff OEMs and

²⁰ CARB, On-Road Heavy-Duty and Off-Road Compression Ignition Certification Programs: Certification Steps Overview, <https://perma.cc/UUT3-HWG5>.

1 other heavy-vehicle manufacturers with unfavorable regulatory treatment if they challenge the
2 preempted standards, including that CARB will identify “opportunities for special considerations and
3 flexibilities for” manufacturers when crafting future standards only if those manufacturers continue
4 following the standards that California is prohibited by the Clean Air Act from attempting to enforce.
5 *See* Executive Order N-27-25. Further, California has stated its intent to prohibit its agencies from
6 purchasing vehicles unless they are from manufacturers that agree with CARB’s position—a pledge to
7 punitively restrict the purchase of Plaintiff OEMs’ products in its government-owned fleet—and has
8 directed de-prioritizing those manufacturers from government incentive programs. *See supra* ¶¶ 63-
9 64. Both the May 23, 2025 MAC and Executive Order N-27-25 root the requirement to comply with
10 preempted regulations in the Clean Truck Partnership—a document that, as detailed above, includes
11 measures to restrict manufacturers’ ability to challenge the legality of CARB’s standards.

12 70. As the Ninth Circuit aptly put it, “Courts have adopted various metaphors to encapsulate
13 the dilemma facing a pre-enforcement plaintiff—‘the rock ... and the hard place,’ ‘the Scylla ... and
14 the Charybdis,’ and the choice to comply or ‘bet the farm.’” *Peace Ranch LLC v. Bonta*, 93 F.4th 482,
15 487 (9th Cir. 2024) (citations omitted). Plaintiff OEMs are in such a dilemma here. But as the Supreme
16 Court explained, “where threatened action by *government* is concerned,” a plaintiff is not required “to
17 expose [itself] to liability before bringing suit to challenge the basis for the threat.” *MedImmune, Inc.*
18 *v. Genentech, Inc.*, 549 U.S. 118, 128–29 (2007). Thus, Plaintiff OEMs apply to this Court for declar-
19 atory relief clarifying which laws they must follow when offering new heavy-duty vehicles and engines
20 for sale, and prohibiting the Defendants from violating Plaintiff OEMs’ constitutional rights.

21 22 **COUNT I**

23 **(Clean Air Act Preemption—CARB Standards)**

24 71. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

25 72. The Supremacy Clause of the U.S. Constitution enshrines the “Laws of the United
26 States” as “the supreme Law of the Land.” U.S. Const. Art. VI. Accordingly, the Supremacy Clause
27 “provides the constitutional foundation for federal authority to preempt state law.” *Beaver v. Tarsadia*
28

1 *Hotels*, 816 F.3d 1170, 1178 (9th Cir. 2016). Congress expressly preempts state law “when the text of
2 a federal statute explicitly manifests Congress’s intent to displace state law.” *Ass’n des Éleveurs de*
3 *Canards et d’Oies du Québec v. Bonta*, 33 F.4th 1107, 1114 (9th Cir. 2022). Courts must invalidate
4 preempted state laws. *See CSX Transp., Inc., v. Easterwood*, 507 U.S. 658, 663 (1993) (“Where a state
5 statute conflicts with, or frustrates, federal law, the former must give way.”).

6 73. The Clean Air Act prohibits states from not only adopting, but from any “attempt to
7 enforce any standard” relating to new motor vehicle and engine emissions unless a waiver is granted.
8 42 U.S.C. § 7543(a). The ordinary meaning of “enforce” is to “compel obedience to.” *See Enforce*,
9 Dictionary.com, <https://perma.cc/F4E8-L355> (last visited Aug. 10, 2025); *see also* Black’s Law Dic-
10 tionary (4th rev. ed. 1968) (same). The Supreme Court explained that an “attempt” to enforce an emis-
11 sions standard includes preliminary acts falling short of enforcement. *Engine Mfrs. Ass’n v. S. Coast*
12 *Air Quality Mgmt. Dist.*, 541 U.S. 246, 257 (2004). As the court observed, the term “attempt to en-
13 force” in Section 209(a) is not limited to the actual imposition of penalties for violations but includes
14 steps preliminary to that action. *Id.*

15 74. As relevant here, California is trying to enforce emissions standards and conditions
16 precedent to sale of new heavy-duty vehicles and engines, even though its heavy-duty vehicle emis-
17 sions standards are all preempted by the Clean Air Act:

18 a. *First*, all standards contained within the waiver submissions to EPA for
19 Advanced Clean Trucks, Omnibus Low NOx, and Advanced Clean Cars II are
20 preempted because the Clean Air Act waivers granted based on those submissions were
21 *explicitly* revoked by Congressional resolutions passed pursuant to the Congressional
22 Review Act. Without any operative waivers, CARB is therefore preempted from “at-
23 tempt[ing] to enforce” or requiring “certification, inspection, or any other approval re-
24 lating to” a manufacturer’s compliance with Advanced Clean Trucks, Omnibus Low
25 NOx, and Advanced Clean Cars II. 42 U.S.C. § 7543(a). This prohibition also reaches
26 the evaporative emissions and refueling emissions standards applicable to heavy-duty
27
28

vehicles along with the medium-duty on-board diagnostics standards, which were included in the Advanced Clean Cars II waiver, as well as the heavy-duty warranty, zero-emission airport shuttles, and certification of zero-emission powertrain regulations included in the Advanced Clean Trucks waiver.

b. *Second*, the Advanced Clean Fleets, Phase 2 Greenhouse Gas, and Heavy-Duty On-Board Diagnostic standards lack waivers under the Clean Air Act and are thus preempted. First, CARB withdrew its waiver request to EPA for Advanced Clean Fleets on January 13, 2025, before EPA could make a waiver decision. By CARB’s own account, without a Clean Air Act waiver, Advanced Clean Fleets is “dead on its feet.”²¹ Second, although CARB previously indicated it would submit a waiver request to EPA for its Phase 2 Greenhouse Gas standards, there is no public indication it has submitted such a waiver or that one has been issued. The Phase 2 Greenhouse Gas standards therefore must likewise be considered a legal nullity. Finally, as to the Heavy-Duty On-Board Diagnostic standards, CARB has failed to obtain a waiver for the current standards, and thus the standards currently adopted in California has no preemption waiver to support it.

75. Because none of the aforementioned CARB standards have lawful and operative Clean Air Act waivers, they are expressly preempted by federal law.

76. Absent declaratory and injunctive relief, in a matter of weeks Plaintiff OEMs will need to begin investing or will be forced to continue to invest substantial resources to certify to and comply with California’s model year 2026 emissions standards.

77. Such investments would irreparably harm Plaintiff OEMs. *See, e.g., Thunder Basin Coal Co. v. Reich*, 510 U.S. 200, 220–21 (1994) (Scalia, J., concurring in part and in the judgment) (“[C]omplying with a regulation later held invalid almost always produces the irreparable harm of nonrecoverable compliance costs.”). Because sovereign immunity bars money damages against a state,

²¹ Dean Florez, Why California recently revised its clean air regulations for zero-emission trucks, The Sacramento Bee (May 6, 2025), <https://www.sacbee.com/opinion/op-ed/article305738891.html>.

1 *California Pharm. Ass’n v. Maxwell-Jolly*, 563 F.3d 847, 851–52 (9th Cir. 2009), *vacated on other*
2 *grounds*, 565 U.S. 606 (2012), Plaintiff OEMs would thus not be able to recover any costs resulting
3 from complying with regulations later found to be invalid, a harm that is by definition unrecoverable
4 and irreparable, *see Texas v. EPA*, 829 F.3d 405, 434 (5th Cir. 2016).

5 78. Plaintiff OEMs are therefore entitled to (1) a declaration that CARB’s emissions stand-
6 ards applicable to new heavy-duty vehicles and engines are preempted by the Clean Air Act, and (2) an
7 injunction barring Defendants from taking any steps to enforce those standards against Plaintiff OEMs.

8 9 **COUNT II**

10 **(Clean Air Act Preemption—May 23, 2025 MAC & EO N-27-25)**

11 79. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

12 80. The Clean Air Act provides that absent a preemption waiver, “[n]o State or any political
13 subdivision thereof shall adopt or attempt to enforce any standard relating to the control of emissions
14 from new motor vehicles or ... engines,” including by requiring “certification, inspection, or any other
15 approval relating to the control of emissions” as a condition of sale. 42 U.S.C. § 7543(a).

16 81. Because none of CARB’s emissions standards applicable to new heavy-duty vehicles
17 and engines have lawful and operative waivers, they are preempted by the Clean Air Act.

18 82. Nevertheless, Defendants are “attempt[ing] to enforce” their preempted emissions
19 standards in the following two ways:

20 a. *First*, CARB issued a MAC in which it announced that it “will continue
21 to accept and process” certification applications from manufacturers demonstrating
22 compliance with the standards set forth in Advanced Clean Trucks and Omnibus Low
23 NOx, and that such certification is required to “enable lawful vehicle sales in Califor-
24 nia.” May 23, 2025 MAC at 2–3 (citing statutes that make it illegal to sell uncertified
25 vehicles).

26 b. *Second*, in Executive Order N-27-25, Governor Newsom directed CARB
27 to penalize any heavy-duty vehicle manufacturers that fail to certify compliance with
28

CARB’s preempted standards. Those penalties include deprioritizing the non-certifying “manufacturers in government vehicle procurement decisions,” cutting their access to “funding” relating to “the purchase of zero-emission vehicles,” and leveraging any other “special considerations and flexibilities” in crafting future rules to disadvantage non-certifying manufacturers. Executive Order N-27-25 at 3.

83. The May 23, 2025 MAC and Executive Order N-27-25 are therefore unlawful “attempt[s] to enforce” preempted emissions standards, and they impose unlawful “certification” requirements “relating to the control of emissions” as a condition of sale in California. 42 U.S.C. § 7543(a); *see* California State Motor Vehicle Pollution Control Standards; Waiver of Federal Preemption; Notice of Determination, 55 Fed. Reg. 28,825 (July 13, 1990) (explaining that prior EPA preemption waivers for specific “classes of vehicles and engines, based on California’s standards and/or accompanying enforcement procedures, removes the prohibitions of section 209(a) regarding ... conditions precedent for those classes”).).

84. Such actions are expressly preempted by the Clean Air Act.

85. Absent declaratory and injunctive relief, Plaintiff OEMs will be irreparably harmed as they are now forced to choose between investing substantial resources to comply with ultimately preempted standards on the one hand, and risking significant liability (and a loss of customer goodwill) from regulatory noncompliance on the other hand. *Morales v. Trans World Airlines, Inc.*, 504 U.S. 374, 381 (1992); *Am. Trucking Ass’n, Inc. v. City of Los Angeles*, 559 F.3d 1046, 1057–58 (9th Cir. 2009).

86. Plaintiff OEMs are thus entitled to (1) a declaratory judgment that the May 23, 2025 MAC and Executive Order N-27-25 violate the Clean Air Act and Supremacy Clause of the U.S. Constitution; and (2) an injunction barring Defendants from carrying out the enforcement, compliance, and punishment directives described in the May 23, 2025 MAC and Executive Order N-27-25.

COUNT III

(Clean Air Act Preemption—Clean Truck Partnership)

87. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

88. Section 209(a) of the Clean Air Act broadly preempts actions by any “State or any political subdivision thereof” that “*adopt or attempt to enforce* ... any standard relating to the control of emissions from new motor vehicles or new motor vehicle engines” subject to federal regulation. 42 U.S.C. § 7543(a) (emphasis added). By dictating that manufacturers must “meet, in California, the requirements of the relevant regulations ... regardless of the outcome of any litigation challenging the waivers/authorizations for those regulations, or CARB’s overall authority to implement those regulations,” Ex. A (CTP) App’x B, the Clean Truck Partnership violates both strictures of Section 209(a)’s comprehensive and express preemption of state action.

89. First, the Clean Truck Partnership operates as an *adoption* of a standard. Specifically, it purports to readopt and implement the CARB standards at issue in the event of litigation outcomes adverse to CARB. Functionally, the Clean Truck Partnership thus becomes the backstop regulatory mechanism for CARB to implement the specific emissions standards—the listed regulations—applicable to heavy-duty vehicles and engines. The Clean Truck Partnership applies to all manufacturer signatories, which represent all manufacturers of heavy-duty on-highway internal-combustion vehicles and engines. Ex. A (CTP) ¶ 2, App’x B, at 1.

90. Second, by purporting to require compliance by the manufacturers, in the absence of lawful authority, the Clean Truck Partnership represents an *attempt to enforce* the cited standards. *See* Executive Order N-27-25 at 2 (describing requirements of the Clean Truck Partnership as requiring manufacturers “to meet California’s heavy-duty vehicle emission standards that will require the sale and adoption of zero-emissions technology in California, regardless of the outcome of any change in law concerning California’s authority to implement its more stringent emissions standards under the federal Clean Air Act”).

91. Any adoption of a standard or attempt to enforce a standard relating to the control of emissions must have a waiver from EPA, or it is expressly preempted. *See* 42 U.S.C. §§ 7543(a), (b).

1 The Clean Truck Partnership lacks a waiver and is thus preempted by Section 209(a).

2 92. Even if the Clean Truck Partnership were understood as an agreement rather than the
3 adoption and enforcement of a backstop regulation, it still cannot be a backdoor for CARB to enforce
4 preempted emissions standards. Under well-established law, “a government official cannot do indi-
5 rectly what she is barred from doing directly.” *Nat’l Rifle Ass’n of Am. v. Vullo*, 602 U.S. 175, 190
6 (2024). Because Defendants cannot directly enforce their preempted standards—which would violate
7 the Supremacy Clause and frustrate Congress’s decision to ensure that the nation is governed by a
8 single national emissions policy—they cannot use the Clean Truck Partnership to indirectly accomplish
9 the same end. After all, “[i]t would be a palpable incongruity to strike down” an act that directly
10 compels compliance with a preempted law, while “uphold[ing] an act by which the same result is ac-
11 complished under the guise of a surrender of a right in exchange for a valuable privilege.” *Frost v.*
12 *R.R. Comm’n of State of Cal.*, 271 U.S. 583, 593 (1926).

13 93. Therefore, the Clean Truck Partnership is preempted for the same reasons as the May
14 23, 2025 MAC and Executive Order N-27-25 are preempted. Absent declaratory and injunctive relief,
15 Plaintiff OEMs will be irreparably harmed as they are forced to choose between investing substantial
16 resources to comply with ultimately preempted standards on the one hand, and risking significant lia-
17 bility (and a loss of customer goodwill) from regulatory noncompliance on the other hand. *Morales*,
18 504 U.S. at 381; *Am. Trucking Ass’ns*, 559 F.3d at 1057–58.

19 94. Plaintiff OEMs are therefore entitled to (1) a declaratory judgment that the Clean Truck
20 Partnership violates the Clean Air Act and Supremacy Clause of the U.S. Constitution, and (2) an in-
21 junction barring Defendants from taking any steps to enforce the Clean Truck Partnership.

22 23 COUNT IV

24 (First Amendment—EO N-27-25, May 23, 2025 MAC, Clean Truck Partnership)

25 95. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

26 96. The First Amendment prohibits governments from “abridging the freedom of speech”
27 or the right “to petition the Government for a redress of grievances.” U.S. Const. amend. I; *see also*

1 *Gitlow v. New York*, 268 U.S. 652 (1925) (incorporating the First Amendment against the States).

2 97. At the heart of the First Amendment is “a profound national commitment to the principle
3 that debate on public issues should be uninhibited, robust, and wide-open.” *N.Y. Times Co. v. Sullivan*,
4 376 U.S. 254, 270 (1964). Standing shoulder to shoulder with the citizenry’s interest in uninhibited,
5 robust debate on public issues is its equally profound “mistrust of governmental power.” *Citizens*
6 *United v. Fed. Election Comm’n*, 558 U.S. 310, 340 (2010).

7 98. To protect these freedoms, the First Amendment generally prohibits government offi-
8 cials from “impos[ing] rules and conditions which in effect insulate [their] own laws from legitimate
9 judicial challenge.” *Legal Servs. Corp. v. Velazquez*, 531 U.S. 533, 548–49 (2001).

10 99. A condition that restricts a citizen’s right to bring lawful challenges against the govern-
11 ment will be void and unenforceable if the government’s asserted interests in enforcing that condition
12 are outweighed by strong policy interests that are rooted in the First Amendment. *Davies v. Grossmont*
13 *Union High Sch. Dist.*, 930 F.2d 1390, 1399 (9th Cir. 1991). By contrast, a condition that requires a
14 private party to forfeit their First Amendment rights is valid and enforceable if the government has a
15 compelling interest in the restriction and there is a sufficiently “close nexus—a tight fit—between the
16 specific interest the government seeks to advance ... and the specific right waived.” *Id.*

17 100. The government’s interest in conditioning favorable treatment on the waiver of a con-
18 stitutional right “may wane as time passes,” however. *Powell v. SEC*, --- F.4th ----, No. 24-1899, 2025
19 WL 2233792, at *11 (9th Cir. Aug. 6, 2025).

20 101. Here, whatever compelling interest Defendants might have had prior to June 2025 in
21 enforcing the Clean Truck Partnership and its conditions limiting Plaintiffs’ rights to challenge those
22 conditions, such interests no longer exist today.

23 102. Indeed, when the parties entered into the Clean Truck Partnership in 2023, the federal
24 government had not yet enacted laws that specifically preempted California from enforcing its emis-
25 sions standards. On the contrary, at that time, California could still apply for Clean Air Act waivers
26 from EPA that would allow California to adopt and enforce its own emissions standards. But in June
27 2025, the federal government statutorily vitiated those federal waivers, thereby prohibiting California
28

1 from enforcing the emissions standards contained in the Clean Truck Partnership, a contingency not
2 covered by the document. *See* Ex. A (CTP) ¶ 2 (providing that Plaintiffs’ commitments are triggered
3 by successful “*litigation* challenging the waivers or authorizations for those regulations or of CARB’s
4 overall authority to implement those regulations” (emphasis added)).

5 103. Just as importantly, EPA cannot grant California the waivers it needs to adopt or attempt
6 to enforce the now-preempted emission standards contained in the Clean Truck Partnership—or any
7 other versions “in substantially the same form”—without a subsequent act of Congress specifically
8 authorizing such action. *See* 5 U.S.C. § 801(b)(2). Because Defendants have no interest, let alone a
9 compelling one, in enforcing preempted standards, there can no longer be a “close nexus ... between
10 the specific interest the government seeks to advance” by restricting Plaintiffs’ speech “and the specific
11 right waived.” *Davies*, 930 F.2d at 1399.

12 104. On the other side of the ledger, “[c]riticism of government is at the very center of the
13 constitutionally protected area of free discussion.” *Rosenblatt v. Baer*, 383 U.S. 75, 85 (1966).

14 105. This means that the public interest against enforcing the Clean Truck Partnership’s
15 speech restrictions is “of the highest order,” whereas Defendants have no interest at all in suppressing
16 legitimate challenges against unlawful standards. *Davies*, 930 F.2d at 1397; *see also Velazquez*, 531
17 U.S. at 548–49.

18 106. That imbalance in interests suggests a First Amendment violation in and of itself. But
19 even setting that aside, the Clean Truck Partnership’s speech restrictions are simply too sweeping to
20 satisfy any “nexus” requirement. *See Powell*, --- F.4th ----, 2025 WL 2233792, at *11.

21 107. Indeed, the Clean Truck Partnership not only prevents Plaintiffs from challenging
22 CARB’s standards, but it also requires them to support or remain neutral towards “any prospective
23 Section 177 states’ proposals” to implement CARB’s preempted standards. Ex. A (CTP) ¶ 2, App’x D.

24 108. It is well established that government officials cannot, without violating the First
25 Amendment, require their citizens to follow unlawful standards or force them to “adopt—as their
26 own—the Government’s view on an issue of public concern” as a condition of receiving favorable
27 regulatory treatment. *Agency for Int’l Dev. v. Alliance for Open Society Int’l, Inc.*, 570 U.S. 205, 218
28

1 (2013).

2 109. That Defendants have unconstitutionally restricted Plaintiffs’ speech rights is even more
3 apparent given that Defendants have promised to not only put Plaintiffs “back in the position they were
4 in before” they signed the Clean Truck Partnership if Plaintiffs challenge CARB’s standards and
5 agenda, but have also threatened to make them even worse off if Plaintiffs exercise their speech rights.
6 *Powell*, --- F.4th ----, 2025 WL 2233792, at *11. Indeed, Defendants have threatened to engage in
7 “conduct that, viewed in context, could be reasonably understood to convey a threat of adverse gov-
8 ernment action” in retaliation for speaking against or challenging the government. *See Nat’l Rifle Ass’n*
9 *of Am. v. Vullo*, 602 U.S. 175, 191 (2024).

10 110. For years, California previously has attempted to insulate itself and its emissions regu-
11 lations from legitimate challenge by penalizing any manufacturers who disagree with CARB. *See, e.g.,*
12 *David Shepardson, California to Stop Buying GM, Toyota and Fiat Chrysler Vehicles Over Emissions*
13 *Fight*, Reuters (Nov. 18, 2019), <https://www.reuters.com/article/idUSL2N27Y0HU/> (Governor New-
14 som “halt[ed] all purchases of new vehicles for state government fleets from” manufacturers that did
15 not agree with CARB’s positions in preemption litigation).

16 111. More recently, Governor Newsom issued Executive Order N-27-25, which directs
17 CARB to penalize any heavy-duty truck manufacturers that fail to certify compliance with CARB’s
18 now-preempted standards or comply with the Clean Truck Partnership’s speech restrictions. Those
19 penalties include deprioritizing the non-certifying “manufacturers in government vehicle procurement
20 decisions,” cutting their access to “funding” relating to “the purchase of zero-emission vehicles,” and—
21 most significantly—leveraging “special considerations and flexibilities” in forthcoming regulatory pro-
22 grams to disadvantage manufacturers who refuse to certify compliance with CARB’s preempted stand-
23 ards or otherwise challenge CARB’s emissions agenda. Executive Order N-27-25 at 3.

24 112. CARB’s May 23, 2025 MAC similarly compels manufacturers—by implicit threat of
25 substantial fines—to comply with CARB’s preempted standards and certification requirements, com-
26 pliance that CARB also characterized as “necessary” to “facilitate meeting the commitments of the
27 Clean Truck Partnership” and “enable lawful vehicle sales.” May 23, 2025 MAC at 2–3 (citing Cal.
28

1 Health & Safety Code §§ 43100, 43151-43153).

2 113. For all these reasons, Defendants are violating Plaintiffs’ First Amendment rights.
3 There is no “close nexus ... between the specific interest the government seeks to advance” by enforc-
4 ing the Clean Truck Partnership “and the specific right waived” therein. *Davies*, 930 F.2d at 1399.
5 And “[t]here is no room under our Constitution” for Defendants to use threats of fines and unfavorable
6 treatment to retaliate against critical speech, *Terminiello v. City of Chicago*, 337 U.S. 1, 4 (1949),
7 “insulate [their] own laws from legitimate judicial challenge,” *Velazquez*, 531 U.S. at 548, or enforce
8 unconstitutional and preempted regulations, *Baird*, 81 F.4th at 1042.

9 114. Absent declaratory and injunctive relief, Plaintiff OEMs will be irreparably harmed.
10 *CTIA – The Wireless Ass’n v. City of Berkeley*, 928 F.3d 832, 851 (9th Cir. 2019) (“A party seeking
11 preliminary injunctive relief in a First Amendment context can establish irreparable injury ... by demon-
12 strating the existence of a colorable First Amendment claim.”). Plaintiff OEMs are therefore entitled
13 to (1) a declaration that Executive Order N-27-25 and the May 23, 2025 MAC violate the First Amend-
14 ment’s guarantee of the right to participate in uninhibited debate of issues of public importance; (2) a
15 declaration that the Clean Truck Partnership is unenforceable because it violates the public policy in
16 the First Amendment; and (3) an injunction barring Defendants from using Executive Order N-27-25,
17 the May 23, 2025 MAC, or the Clean Truck Partnership to insulate themselves from legitimate legal
18 challenges or to punish entities that raise such challenges.

19
20 **COUNT V**

21 **(Art. I, § 3 Cal. Constitution—EO N-27-25, May 23, 2025 MAC, Clean Truck Partnership)**

22 115. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

23 116. Article I, Section 3 of the California Constitution provides that “[t]he people have the
24 right to instruct their representatives, petition government for redress of grievances, and assemble
25 freely to consult for the common good.” This provision of the California Constitution is “[a] protective
26 provision more definitive and inclusive” than its federal counterpart in the First Amendment. *Robins*
27 *v. Pruneyard Shopping Ctr.*, 23 Cal. 3d 899, 908, 910 (1979).

1 117. “The right to petition for redress of grievances is the right to complain about and com-
2 plain to the government.” *Wolfgram v. Wells Fargo Bank*, 53 Cal. App. 4th 43, 51 (1997). “The right
3 includes the right to petition the executive or legislative branches directly” and also encompasses “the
4 right to petition the judicial branch for resolution of legal disputes.” *Vargas v. City of Salinas*, 200 Cal.
5 App. 4th 1331, 1342 (2011).

6 118. Under California Civil Code section 52.1(c), “Any individual whose exercise or enjoy-
7 ment of rights secured by the Constitution or laws of the United States, or of rights secured by the
8 Constitution or laws of [California]” may sue the persons who violated their rights for declaratory,
9 injunctive, and monetary relief. California state courts have held that “reasonable, narrowly drawn
10 restrictions designed to prevent abuse of the right can be valid under the state Constitution.” *Chorn v.*
11 *Workers’ Comp. Appeals Bd.*, 245 Cal. App. 4th 1370, 1385 (2016) (cleaned up).

12 119. A government condition that restricts the ability of a party to “file or participate in liti-
13 gation or support legislation to challenge or modify” the terms of that contract will violate Article I,
14 Section 3 unless the government shows that: (1) the condition requiring the party to surrender their
15 petitioning rights is “reasonably related” to a compelling government interest; (2) “the public value of
16 imposing the condition manifestly outweighs its burden on constitutional rights”; and (3) “there are no
17 less restrictive means” to achieve the government interest. *San Diego Cnty. Water Auth. v. Metro.*
18 *Water Dist. of S. California*, 12 Cal. App. 5th 1124, 1157, 1160 (2017). If the government fails to meet
19 its burden, the California Constitution will be violated “however well-informed and voluntary th[e]
20 waiver” of the party’s petitioning rights. *Id.* (citation omitted).

21 120. Here, Defendants—via Executive Order N-27-25, the May 23, 2025 MAC, and the
22 Clean Truck Partnership—have attempted to deny Plaintiff OEMs and other manufacturers their peti-
23 tioning rights guaranteed under the California Constitution. As alleged, Defendants have no cognizable
24 interest in insulating themselves from legitimate legal challenges to state actions. “Where the right to
25 petition is at issue, therefore, the government interest must be unrelated to the suppression of constitu-
26 tionally protected petitioning activity.” *Mejia v. City of Los Angeles*, 156 Cal. App. 4th 151, 163
27 (2007); *cf.* Cal. Civ. Code § 1668 (“All contracts which have for their object, directly or indirectly, to
28

1 exempt any one from responsibility for his own fraud, or willful injury to the person or property of
2 another, or violation of law, whether willful or negligent, are against the policy of the law.”) The right
3 to petition the government “is essential to the functioning of a democracy,” and the interest in protect-
4 ing that right far outweighs any conceivable interest the government might have in insulating CARB
5 from legitimate challenge, especially with respect to federally preempted regulations. *City of San Jose*
6 *v. Superior Ct.*, 2 Cal. 5th 608, 615 (2017).

7 121. Absent declaratory and injunctive relief, Plaintiff OEMs will continue to be irreparably
8 harmed and subjected to violations of its petitioning rights under State law. Plaintiff OEMs are there-
9 fore entitled to (1) a declaration that Executive Order N-27-25, the May 23, 2025 MAC, and Defend-
10 ants’ interpretation of the Clean Truck Partnership violate Article I, Section 3 of the California Consti-
11 tution; and (2) an injunction barring Defendants from enforcing Executive Order N-27-25, the May 23,
12 2025 MAC, or the Clean Truck Partnership to restrict Plaintiff OEMs’ petitioning rights under Article
13 I, Section 3 of the California Constitution.

14
15 **COUNT VI**

16 **(California APA—May 23, 2025 MAC)**

17 122. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

18 123. Pursuant to 28 U.S.C. § 1367(a), subject to certain exceptions, “in any civil action of
19 which the district courts have original jurisdiction, the district courts shall have supplemental jurisdic-
20 tion over all other claims that are so related to claims in the action within such original jurisdiction that
21 they form part of the same case or controversy.”

22 124. Here, it is appropriate for this Court to hear a related state law claim that arises out of
23 the same case and controversy: specifically, that the May 23, 2025 MAC is an underground regulation
24 promulgated in violation of the California Administrative Procedure Act (“California APA”).

25 125. This claim does not raise novel or complex issues of State law, nor does it substantially
26 predominate over the claims over which this Court has original jurisdiction. *See* 28 U.S.C.
27 §§ 1367(c)(1)–(2).

1 126. Under the California APA, any “person may obtain a judicial declaration as to the va-
2 lidity of any regulation or order of repeal by bringing an action for declaratory relief.” Cal. Gov’t Code
3 § 11350.

4 127. The California APA places procedural requirements on state agencies, including CARB,
5 before the agencies can issue regulations to “ensure that those persons or entities whom a regulation
6 will affect have a voice in its creation.” *Tidewater Marine Western, Inc. v. Bradshaw*, 14 Cal. 4th 557,
7 568 (1996); *see also* Cal. Gov’t Code §§ 11346.2, 11346.8. Accordingly, California Government Code
8 section 11340.5(a) states that a state agency shall not “issue, utilize, enforce, or attempt to enforce any
9 guideline, criterion, bulletin, manual, instruction, order, standard of general application, or other rule,
10 which is a regulation as defined in [Government Code] Section 11342.600, unless the guideline, crite-
11 rion, bulletin, manual, instruction, order, standard of general application, or other rule has been adopted
12 as a regulation” and the procedures of the APA have been satisfied. Regulations promulgated in vio-
13 lation of this provision are unlawful “underground regulations.” *See* Cal. Code Regs. tit. 1, § 250.

14 128. Section 11342.600 of the California Government Code “defines ‘regulation’ very
15 broadly to include ‘every rule, regulation, order, or standard of general application or the amendment,
16 supplement, or revision of any rule, regulation, order, or standard adopted by any state agency to im-
17 plement, interpret, or make specific the law enforced or administered by it, or to govern its procedure.’”
18 *Tidewater Marine Western*, 14 Cal. 4th at 571 (quoting Cal. Gov’t Code § 11342(g)). A “regulation”
19 under the California APA “has two principal identifying characteristics.” *Tidewater Marine Western*,
20 14 Cal. 4th at 571. “First, the agency must intend its rule to apply generally, rather than in a specific
21 case,” and second, the regulation must “implement, interpret, or make specific the law enforced or
22 administered by [the agency], or govern ... [the agency’s] procedure.” *Id.*

23 129. The May 23, 2025 MAC is an underground regulation promulgated in violation of the
24 California APA.

25 a. *First*, the MAC is a rule of general application. The MAC is a “blanket
26 interpretation[s]” that CARB “intend[s] to apply in ... all cases of a particular class or
27
28

1 kind,” indicating that it too embodies “polic[ies] of general application and thus ... reg-
2 ulation[s].” *Tidewater Marine Western*, 14 Cal. 4th at 573; *see also Vasquez v. Dep’t*
3 *of Pesticide Regul.*, 68 Cal. App. 5th 672, 689 (2021). The MAC is not an individual
4 adjudication. It does not involve a case-specific exercise of CARB’s discretion and is
5 not designed to apply a “rule to a specific set of existing facts.” *Strumsky v. San Diego*
6 *Cnty. Emps. Ret. Ass’n*, 11 Cal. 3d 28, 35 n.2 (1974). Rather, it sets forth which stand-
7 ards are in effect in California for the 2026 model year, impacting an entire industry,
8 and therefore has a prospective legislative purpose. For example, in the MAC, CARB
9 takes the position that it will certify vehicles for model year 2026 pursuant the Advanced
10 Clean Trucks and Omnibus Low NOx. The MAC is thus a new regulatory program that
11 requires manufacturers of internal-combustion powered on-road heavy-duty trucks and
12 engines to comply with CARB’s now-preempted standards.

13 b. *Second*, the MAC implements CARB’s legal authority. It creates new
14 obligations for an entire industry, requiring all manufacturers of heavy-duty trucks and
15 engines to comply with preempted standards. Although the underlying regulations went
16 through the California APA process, the requirement that manufacturers certify vehicles
17 and engines for model year 2026 pursuant to those regulations even in the absence of
18 federal authorization under the Clean Air Act is a novel interpretation and implementa-
19 tion of CARB’s legal authority, yet this requirement did not go through the California
20 APA process. The MAC also provides CARB with new authorities not contained in
21 other laws or regulations. For example, the MAC similarly purports that CARB can
22 certify vehicles and engines for the 2026 model year pursuant to the requirements of
23 preempted standards. As such, it “implements and makes specific the law the [agency]
24 administers,” thereby establishing the second requirement for an underground rulemak-
25 ing. *Vasquez*, 68 Cal. App. 5th at 673; *see also Tidewater Marine Western*, 14 Cal. 4th
26 at 571. CARB did not follow the California APA procedures to promulgate the MAC.
27 CARB did not file a copy of the regulatory correspondence with the Secretary of State
28

of California, as required by section 11343 of the California Government Code, nor did CARB follow the requirements to provide notice and an opportunity for public comment as required by Office of Administrative Law regulations. Cal. Code Regs. tit. 1, §§ 5 (Submission of Notices for Publication), 44 (Public Availability of Changes to Regulations).

130. Nor does the MAC satisfy the exemptions in section 11340.9 of the California Government Code, so CARB's actions are not excused from the California APA requirements.

131. The California APA's notice and comment requirements serve to further the APA's goals of "bureaucratic responsiveness and public engagement in agency rulemaking." *Morning Star Co. v. State Bd. of Equalization*, 38 Cal. 4th 324, 333 (2006). In promulgating the MAC as an underground regulation in violation of the California APA, CARB deprived stakeholders of this transparency and engagement that is designed to promote reasoned and informed policymaking.

132. Absent declaratory and injunctive relief, Plaintiff OEMs will continue to be irreparably harmed and subjected to unlawful regulations. Plaintiff OEMs are therefore entitled to (1) a declaration that the May 23, 2025 MAC constitutes an underground regulation that violates the California APA; and (2) an injunction barring Defendants from enforcing the May 23, 2025 MAC.

COUNT VII

(California APA—Clean Truck Partnership)

133. Plaintiffs repeat and reallege the preceding paragraphs as if fully set forth herein.

134. For many of the same reasons, the Clean Truck Partnership is also an underground regulation promulgated in violation of the California APA.²²

²² The Western States Trucking Association filed a petition with the California Office of Administrative Law ("OAL") alleging that the Clean Truck Partnership is an underground regulation promulgation in violation of the California APA on June 18, 2025. Western States Trucking Association, WSTA Petition to OAL Regarding CTP (June 18, 2025), <https://perma.cc/D9M2-7JT4>. As of the date of this Complaint, the OAL's deadline to determine whether to take up the petition is August 18, 2025. OAL, Underground Regulation Petitions Under Review, <https://perma.cc/ST7F-R7JY>. The California APA provides that administrative exhaustion is not required to seek a judicial determination regarding whether an agency has promulgated an underground regulation. Cal. Gov't Code, § 11350(a) ("The

1 a. *First*, the Clean Truck Partnership includes rules of general application.
2 The Clean Truck Partnership is a “blanket interpretation” that CARB “intend[s] to apply
3 in ... all cases of a particular class or kind,” indicating that it embodies “polic[ies] of
4 general application and thus [] regulation[s].” *Tidewater Marine Western*, 14 Cal. 4th
5 at 573; *see also Vasquez*, 68 Cal. App. 5th at 689. Here, the Clean Truck Partnership
6 applies to all manufacturers of internal-combustion powered on-road heavy-duty trucks
7 and engines, and it sets forth which regulations are in effect in California across this
8 entire industry. Further, it purports to provide CARB with the authority to maintain its
9 certification program regardless of whether CARB has any underlying authorization for
10 its regulations. In doing so, the Clean Truck Partnership creates a new regulatory pro-
11 gram where all manufacturers in an industry must comply with preempted standards, all
12 as upheld through the enforcement mechanism of CARB’s requirement for certification.

13 b. Framing the Clean Truck Partnership as an agreement does not exempt
14 that action from being a rule of general applicability subject to the California APA.
15 State law and principles of administrative law dictate that CARB was not permitted to
16 use an agreement with regulated parties to avoid California APA procedural require-
17 ments. *Vasquez*, 68 Cal. App. 5th at 687; *see also Am. Hosp. Ass’n v. Bowen*, 834 F.2d
18 1037, 1053–54 (D.C. Cir. 1987).

19 c. *Second*, the Clean Truck Partnership implements CARB’s legal author-
20 ity. The Clean Truck Partnership purports to create new obligations for an entire indus-
21 try, requiring all manufacturers of internal-combustion powered on-road heavy-duty
22 trucks and engines to comply with preempted standards. Although the underlying reg-
23 ulations went through the California APA process, the requirement that manufacturers
24 comply with those regulations even in the absence of federal authorization is a novel

25
26 _____
27 right to judicial determination shall not be affected by the failure either to petition or to seek reconsid-
28 eration of a petition filed pursuant to Section 11340.7 before the agency promulgating the regulation
 or order of repeal”); Cal. Gov’t Code. § 11340.7 (providing the right to petition state agencies for the
 repeal of a regulation).

1 interpretation and implementation of CARB’s legal authority, yet this requirement did
2 not go through the California APA process. The Clean Truck Partnership also provides
3 CARB with new authorities not contained in other laws or regulations. For example,
4 the Clean Truck Partnership provides that CARB can maintain its certification program
5 regardless of the authorization for the regulations underlying the certification program.
6 As such, the Clean Truck Partnership “implements and makes specific the law the
7 [agency] administers,” thereby establishing the second requirement for an underground
8 rulemaking. *Vasquez*, 68 Cal. App. 5th at 673; *see also Tidewater Marine Western*, 14
9 Cal. 4th at 571.

10 135. Nor does the Clean Truck Partnership satisfy the exemptions in section 11340.9 of the
11 California Government Code, so CARB’s actions are not excused from the California APA require-
12 ments.

13 136. In promulgating the Clean Truck Partnership as an underground regulation in violation
14 of the California APA, CARB deprived stakeholders of the transparency and engagement that is re-
15 quired by law to promote reasoned and informed policymaking. *Morning Star*, 38 Cal. 4th at 333.

16 137. Absent declaratory and injunctive relief, Plaintiff OEMs will continue to be irreparably
17 harmed and subjected to unlawful regulations. Plaintiff OEMs are therefore entitled to (1) a declaration
18 that the Clean Truck Partnership constitutes an underground regulation that violates the California
19 APA; and (2) an injunction barring Defendants from enforcing the Clean Truck Partnership.

20
21 **PRAYER FOR RELIEF**

22 WHEREFORE, Plaintiff OEMs respectfully request that this Court enter the following relief:

23 I. A declaratory judgment, pursuant to 28 U.S.C. § 2201 and Rule 57 of the Federal Rules
24 of Civil Procedure, that all emissions standards included in the waiver submissions for Advanced Clean
25 Trucks, Advanced Clean Cars II, and Omnibus Low NOx are preempted by the Clean Air Act;

26 II. A declaratory judgment, pursuant to 28 U.S.C. § 2201 and Rule 57 of the Federal Rules
27 of Civil Procedure, that Heavy-Duty On-Board Diagnostics, and Phase 2 Greenhouse Gas, and the 100
28

1 percent zero-emission vehicle sales requirement in Advanced Clean Fleets are preempted by the Clean
2 Air Act;

3 III. A declaratory judgment, pursuant to 28 U.S.C. § 2201 and Rule 57 of the Federal Rules
4 of Civil Procedure, that CARB cannot require any conditions precedent to initial retail sale, including
5 requirements under California Health and Safety Code §§ 43151 and 43512 for CARB certification
6 prior to initial retail sale, when CARB lacks valid preemption waivers for its emissions standards;

7 IV A declaratory judgment, pursuant to 28 U.S.C. § 2201 and Rule 57 of the Federal Rules
8 of Civil Procedure, that the May 23, 2025 MAC, Executive Order N-27-25, and the Clean Truck Part-
9 nership violate the Clean Air Act and the Supremacy Clause of the U.S. Constitution;

10 V. A declaratory judgment, pursuant to 28 U.S.C. § 2201 and Rule 57 of the Federal Rules
11 of Civil Procedure, that Executive Order N-27-25, the May 23, 2025 MAC, and the Clean Truck Part-
12 nership violate the First Amendment to the U.S. Constitution, public policy, and Article I, Section 3 of
13 the California Constitution, and are therefore void;

14 VI. A declaratory judgment, pursuant to 28 U.S.C. §§ 1367 and 2201, and Rule 57 of the
15 Federal Rules of Civil Procedure, that the May 23, 2025 MAC, and Clean Truck Partnership are un-
16 derground regulations in violation of California Government Code § 11340.5(a) and thus invalid;

17 VII. Preliminary and permanent injunctions, pursuant to Rule 65 of the Federal Rules of
18 Civil Procedure:

19 a. Enjoining Defendants from enforcing or attempting to enforce the Advanced
20 Clean Trucks, Advanced Clean Fleets, Advanced Clean Cars II, Heavy-Duty On-Board Diag-
21 nostic, and Omnibus Low NOx, and Phase 2 Greenhouse Gas standards without a waiver of
22 preemption from EPA;

23 b. Enjoining Defendants from requiring any conditions precedent to initial retail
24 sale, including requirements under California Health and Safety Code §§ 43151 and 43512 for
25 CARB certification prior to initial retail sale, without a waiver of preemption from EPA;

26 c. Enjoining Defendants from enforcing or attempting to enforce any standard or
27 approval relating to the control of emissions for new heavy-duty motor vehicles or engines for
28

1 which a waiver is necessary under 42 U.S.C. § 7543 and has not been obtained;

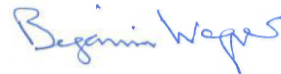

2 d. Enjoining Defendants from enforcing or attempting to enforce Executive Order
3 N-27-25, the May 23, 2025 MAC, and the Clean Truck Partnership;

4 e. Requiring Defendants to redress the unlawful promulgation of the underground
5 regulations included in the May 23, 2025 MAC, and Clean Truck Partnership by reissuing these
6 regulations in accordance with the California APA, or, in the alternative, withdrawing such
7 regulations; and

8 VII. Such other relief available under federal or state law that may be considered appropriate
9 under the circumstances, including fees and costs of this action to the extent allowed by federal or state
10 law.

11
12 Dated: August 11, 2025

Respectfully submitted,

13
14
